The Future of Nature 2013-10-22

divan innovative anthology that offers a global perspective on how people think about predicting the future of life on earth div

Dreaming the Future 2012

in a collection of short witty poignant even humorous essays ausubel tracks the big ideas emerging trends and game changing developments of our time he guides us through our watershed moment showing how it s possible to emerge from a world where corporations are citizens the gap between rich and poor is cavernous and biodiversity and the climate are under assault and create a world where we take our cues from nature and focus on justice equity diversity democracy and peace

Science and Nature 2017-11-07

science and nature brings together the work and insights of historian carolyn merchant on the history of science environmental history and ethics the book explores her ideas about the interconnections among science women nature and history as they have emerged over her academic lifetime focusing on topics such as the death of nature the scientific revolution women in the history of science and environment and partnership ethics it synthesizes her writings and sets out a vision for the twenty first century anyone interested in the interactions between science and nature in the past present and future will want to read this book it is an ideal text for courses on the environment environmental history history of science and the philosophy of science

Next Nature 2020

an examination of how western visions of endless future growth have contributed to the global environmental crisis for centuries the west has produced stories about the future in which humans use advanced science and technology to transform the earth michael rawson uses a wide range of works that include francis bacon s new atlantis the science fiction novels of jules verne and even the speculations of think tanks like the rand corporation to reveal the environmental paradox at the heart of these narratives the single minded expectation of unlimited growth on a finite planet rawson shows how these stories which have long pervaded western dreams about the future have helped to enable an unprecedentedly abundant and technology driven lifestyle for some while bringing the threat of environmental disaster to all adapting to ecological realities he argues hinges on the ability to create new visions of tomorrow that decouple growth from the idea of progress

The Nature of Tomorrow 2021-11-16

recent developments in biotechnology and genetic research are raising complex ethical questions concerning the legitimate scope and limits of genetic intervention as we begin to contemplate the possibility of intervening in the human genome to prevent diseases we cannot help but feel that the human species might soon be able to take its biological evolution in its own hands playing god is the metaphor commonly used for this self transformation of the species which it seems might soon be within our grasp in this important new book jürgen habermas the most influential philosopher and social thinker in germany today takes up the question of genetic engineering and its ethical implications and subjects it to careful philosophical scrutiny his analysis is guided by the view that genetic manipulation is bound up with the

identity and self understanding of the species we cannot rule out the possibility that knowledge of one s own hereditary factors may prove to be restrictive for the choice of an individual s way of life and may undermine the symmetrical relations between free and equal human beings in the concluding chapter which was delivered as a lecture on receiving the peace prize of the german book trade for 2001 habermas broadens the discussion to examine the tension between science and religion in the modern world a tension which exploded with such tragic violence on september 11th

The Future of Human Nature **2014-10-15**

national bestseller the pulitzer prize winning author of the sixth extinction returns to humanity s transformative impact on the environment now asking after doing so much damage can we change nature this time to save it recommended by president obama and bill gates shortlisted for the wainwright prize for writing one of the ten best books of the year the washington post one of the best books of the year time esquire publishers weekly kirkus reviews beautifully and insistently kolbert shows us that it is time to think radically about the ways we manage the environment helen macdonald the new york times with a new afterword by the author that man should have dominion over all the earth and over every creeping thing that creepeth upon the earth is a prophecy that has hardened into fact so pervasive are human impacts on the planet that it s said we live in a new geological epoch the anthropocene in under a white sky elizabeth kolbert takes a hard look at the new world we are creating along the way she meets biologists who are trying to preserve the world s rarest fish which lives in a single tiny pool in the middle of the mojave engineers who are turning carbon emissions to stone in

we have so tamed colonized and contaminated the natural world that safeguarding it from humans is no longer an option humanity's imprint is now everywhere and all efforts to preserve nature require extensive human intervention at the same time we are repeatedly told that there is no such thing as nature itself only our own conceptions of it one person's endangered species is another's dinner or source of income in *Living Through the End of Nature* Paul Wapner probes the meaning of environmentalism in a postnature age Wapner argues that we can neither go back to a preindustrial Elysium nor forward to a technological utopia he proposes a third way that takes seriously the breached boundary between humans and nature and charts a co-evolutionary path in which environmentalists exploit the tension between naturalism and mastery to build a more sustainable ecologically vibrant and socially just world beautifully written and thoughtfully argued *Living Through the End of Nature* provides a powerful vision for environmentalism's future

Living Through the End of Nature

2013-02-08

an award-winning ecology writer goes looking for the wilderness we've forgotten many people believe that only an ecological catastrophe will change humanity's troubled relationship with the natural world in fact as J. B. Mackinnon argues in this unorthodox look at the disappearing wilderness we are living in the midst of a disaster thousands of years in the making and we hardly notice it we have forgotten what nature can be and adapted to a diminished world of our own making in the once and future world Mackinnon invites us to remember nature as it was to reconnect to nature in a meaningful way and to remake a wilder world everywhere he goes looking for landscapes untouched by human hands he revisits a globe exuberant with life where lions roam

provides an overview of predictive science from historical scientific political and behavioral perspectives offers case studies of the use and misuse of scientific predictions on subjects ranging from asteroids to nuclear waste disposal proposes a practical analytical framework for the use of predictive science in setting policy recommends actions and policies that can increase the likelihood of effective decisions contributors include clark chapman charles herrick william h hooke orrin pilkey steve rayner naomi oreskes daniel metlay stanley changnon donald gautier robert moran joanne nigg and thomas stewart prediction is the first book to look at the numerous and varied scientific social and political factors involved in making and using predictions relevant to a wide range of current environmental controversies and challenges it provides much needed context for understanding predictions and scientific pronouncements and is an important work for anyone concerned with interactions between science and policy making

The Nature of Events 2008

in the seemingly mundane northern farm of early america and the people who sought to improve its productivity and efficiency emily pawley finds a world rich with innovative practices and marked by a developing interrelationship between scientific knowledge industrial methods and capitalism agricultural improvers became increasingly scientific driving tremendous increases in the range and volume of agricultural output and transforming american conceptions of expertise success and exploitation pawley s focus on soil fertilizer apples mulberries agricultural fairs and experimental stations shows each nominally dull subject to have been an area of intellectual ferment and sharp contestation mercantile epistemological and otherwise

The Nature and Future of Tourism 2022

Jacob Bronowski truly educated an enormous number of members of that diffuse population usually referred to with a hint of condescension as educated laymen through his widely shared television series on the concepts of science and through such highly regarded books as *The Identity of Man* and *The Ascent of Man*. This volume extends the process to a further level of insight and it may be more than suggestive that its final essay is entitled *The Fulfillment of Man*. Bronowski was an extraordinary teacher precisely because he did not condescend to his audience; he did not talk down to them. He knew how to talk them up to something near his own level. However, briefly, he felt that if human beings are taken seriously, they can be led to respond to serious and difficult subjects that relate to the deepest aspects of nature, both beyond and within themselves. A sense of the future succeeds brilliantly in this respect in part because it is a collection of essays that can be read independently as self-contained, delimited presentations and in part because the book is more than the sum of these individual essays. It is a unified whole in which Bronowski's most abiding concerns are interrelated, juxtaposed, and tested for consistency in various intellectual contexts. The major unifying theme of the work is the intensely creative and human nature of the scientific enterprise, its kinship at the highest levels of individual achievement with comparable manifestations of the artistic imagination, and its ethical imperatives evolved within the community of scientists over the centuries, which both embody and forge the values of civilized life at large. Still, the book's diversity of topics is as striking as the unity of its aim. Among the subjects within the realm of Bronowski's mind that are presented here are the limitations of formal logic and experimental methods, the epistemology of science, the distinctive nature of human language and the human mind, and the bases of biological and cultural evolution. Bronowski also contrasts the findings of science

as the here and now of man's understanding with the ongoing activity of science as the open ended search for truth and he undertakes to demonstrate that the factual individual is and the ethical societal ought can be derived each from the other a mathematician by training bronowski published poetry as well as books on literature and intellectual history in addition to those mentioned above the common sense of science and science and human values are among the most widely read of his books before his death in 1974 he was for many years a senior fellow at the salk institute for biological studies where his formal area of research was concerned with the questions of human specificity and uniqueness clearly his interests ranged far beyond this area and in many directions

Blessings from Nature and Science for the Future 2017-10-17

lawrence lessig the most important thinker on intellectual property in the internet era the new yorker masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few the so called big media never before have the cultural powers that be been able to exert such control over what we can and can't do with the culture around us our society defends free markets and free speech why then does it permit such top down control to lose our long tradition of free culture lawrence lessig shows us is to lose our freedom to create our freedom to build and ultimately our freedom to imagine

A History of the World in Seven Cheap

Things 2003-12-10

first published in 1998 this is volume xiv of eighteen in the sociology of behaviour and psychology series this text is concerned with sociological inquiry into society and nature written in 1946 it investigates the idea that society and nature if conceived of as two different systems of elements are the results of two different methods of thinking and are only as such two different objects the same elements connected with each other according to the principle of causality constitute nature connected with each other according to another namely a normative principle they constitute society

The Necessary Nature of Future Firms 2000-04-01

human genetic enhancement examined from the standpoint of the new field of political bioethics displaces the age old question of truth what is human nature this book displaces that question with another what kind of human nature should humans want to create for themselves to answer that question this book answers two others what constraints should limit the applications of rapidly developing biotechnologies what could possibly form the basis for corresponding public policy in a democratic society benjamin gregg focuses on the distinctly political dimensions of human nature where politics refers to competition among competing values on which to base public policy legislation and political culture this book offers citizens of democratic communities a broad perspective on how they together might best approach urgent questions of how to deal with the socially and morally challenging potential for human genetic engineering

Prediction 1831

why it matters that our relationship with nature is increasingly mediated and augmented by technology our forebears may have had a close connection with the natural world but increasingly we experience technological nature children come of age watching digital nature programs on television they inhabit virtual lands in digital games and they play with robotic animals purchased at big box stores until a few years ago hunters could telehunt shoot and kill animals in texas from a computer anywhere in the world via a interface does it matter that much of our experience with nature is mediated and augmented by technology in technological nature peter kahn argues that it does and shows how it affects our well being kahn describes his investigations of children s and adults experiences of cutting edge technological nature he and his team installed technological nature windows 50 inch plasma screens showing high definition broadcasts of real time local nature views in inside offices on his university campus and assessed the physiological and psychological effects on viewers he studied children s and adults relationships with the robotic dog aibo including possible benefits for children with autism and he studied online telegardening a pastoral alternative to telehunting kahn s studies show that in terms of human well being technological nature is better than no nature but not as good as actual nature we should develop and use technological nature as a bonus on life not as its substitute and re envision what is beautiful and fulfilling and often wild in essence in our relationship with the natural world
