the gap between big ideas about teaching students to think and educational practice this book addresses this question by a unique combination of theory field experience and elaborate educational research its basic idea is to look at science instruction with regard to two sets of explicit goals one set refers to teaching science concepts and the second set refers to teaching higher order thinking this book tells about how thinking can be taught not only in the rare and unique conditions that are so typical of affluent experimental educational projects but also in the less privileged but much more common conditions of educational practice that most schools have to endure it provides empirical evidence showing that students from all academic levels actually improve their thinking and their scientific knowledge following the thinking curricula and discusses specific means for teaching higher order thinking to students with low academic achievements the second part of the book addresses issues that pertain to teachers professional development and to their knowledge and beliefs regarding the teaching of higher order thinking this book is intended for a very large audience researchers including graduate students curricular designers practicing and pre service teachers college students teacher educators and those interesteristic teducational reform although the book is primarily about the developmenteef and soft tilinking in science classrooms most of it chapters mayaberns interestys to educators from all disciplines volumes include statutory record in this volume the author reviews the results of research on language performance and proposes a model of production and comprehension although recent developments in linguistics are taken into account consideration of other requirements of a performance model leads to the conclusion that the grammar the speaker has in mind differs from the grammar as currently conceived of by most linguists the author is also critical of recent computer simulations of language performance on the basis that they fall short of describing what goes on in human production and comprehension the author therefore proposes that the basic issues must be rethought and new theoretical foundations reformulated in order to arrive at a viable theory of language functioning in developing the framework of the model presented in this book requirements of flexibility in the performance mechanisms the probabilistic nature of comprehension processes and the interleaving of linguistic rules with context and knowledge of the world are
