The Nature of Technological Knowledge. Are Models of Scientific Change Relevant?

one of the ironies of our time is the sparsity of useful analytic tools for understanding change and development within technology itself for all the diatribes about the disastrous effects of technology on modern life for all the equally uncritical paeans to technology as the panacea for human ills the vociferous pro and anti technology movements have failed to illuminate the nature of technology on a more scholarly level in the midst of claims by marxists and non marxists alike about the technological underpinnings of the major social and economic changes of the last couple of centuries and despite advice given to government and industry about managing science and technology by a small army of consultants and policy analysts technology itself remains locked inside an impenetrable black box a deus ex machina to be invoked when all other explanations of puzzling social and economic pheoomena fail the discipline that has probably done most to penetrate that black box in recent years by studying the 1 internal development of technology is history historians of technology and certain economic historians have carried out careful and detailed studies on the genesis and impact of technological innovations and the structu re of the social systems associated with those innovations within the past few decades tentative consensus about the periodization and the major traditions within the history of technology has begun to emerge at least as far as britain and america in the eighteenth and nineteenth century are concerned

Knowledge and Information Technology Management: Human and Social Perspectives

success in an increasingly competitive market depends on the quality of knowledge which organisations apply to their major business processes for example a supply chain depends on knowledge of diverse areas including raw materials planning manufacturing and distribution likewise product development requires knowledge of consumer requirements new science new technology and marketing knowledge is broadly defined as credible information that is of potential value to an organisation knowledge management km is a function of generation and dissemination of information developing a shared understanding of information filtering shared understandings into degrees of potential value and storing valuable knowledge within the confines of an accessible organisational mechanism

Global Information Society

2013

we have been living and working in the information society for decades yet still we struggle to understand and keep up in the face of its constant flux and vast scope in this unique interdisciplinary text three scholars at the forefront of this dynamic field provide a clear conceptual framework and interpretation of the global information society they explain the three pillars of the information society technology knowledge and mobility and the global information society as a whole both as an interconnected web and a regionally distinct phenomenon offering a nuanced understanding of this complex subject this book will enable students to navigate and thrive in the dynamic and evolving world of information and communication technology

The Dynamics of Technology

2003-12-06

this is a good book for a general reader to understand the inter relationship between science technology and society and particularly the contribution made by engineers towards technology development technovation this volume a collection of 10 essays by leading practitioners from both east and west shows how technology which has become a major force in our lives today is itself like a powerful engine the creation and maintenance of this engine depends on engineers on ideas from science research and development on the pressures and constraints of the market place and national security on the skills and knowledge of manpower and on the financial resources that banks governments and other institutions can command and provide this book does not expound any one point of view rather it tries to understand how the engine of technology works how it is a complex system whose working is shaped by political economic social and cultural forces and in turn shapes them

Technology and the Politics of Knowledge
