excerpt from a text book of human physiology designed for the use of practitioners and students of medicine in preparing the first edition of this work published about five years ago i hoped that my experience as a practical physiologist and public teacher and the discipline of eleven years during which i was occupied in writing my large treatise in five volumes might enable me to make a book which would meet the wants of practitioners and students of medicine my expectations in this regard have been more than fulfilled my work has been very favorably received by the profession it is extensively used as a text book and two very large impressions of the first edition and a second edition published in 1879 have been exhausted encouraged by the favorable reception of the book i have spared no pains in its revision for a third edition i have rewritten certain portions carefully corrected all the errors and inaccuracies that i have been able to discover and have eliminated here and there statements that did not seem to me to be fully in accord with the existing state of physiological knowledge in addition to minor corrections i have made the following important alterations i have adopted the views of bowman lately confirmed by the experiments of heidenhain and others with regard to the functions of the malpighian bodies of the kidney the section upon animal heat has been entirely rewritten and i have given an account of my new experiments upon this subject published in 1879 showing the probable generation of heat in the body by the union of oxygen and hydrogen and the formation of water i have introduced a short description of the cerebral convolutions with a new diagram and a brief account of the recent discovery by boll of retinal red i have also added a diagram illustrating the mechanism of micturition and a figure kindly prepared for me by dr e g loring of new york showing the appearance of the fundus of the eye as seen with the ophthalmoscope about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical

this fifth edition of engineering physiology has the same purpose as the earlier prints to provide physiological information which engineers designers supervisors managers and other planners need to make work and equipment fit the human chapters have been revised figures and tables updated new material discusses among other topics models of the human body that provide practical and design oriented information biomechanics describing the body s capabilities and limitations effects of shift work sleep loss on attitude and performance and new techniques to measure body sizes and the resultant changes in applications of that information the book does not replace standard biological medical chemical textbooks on human physiology instead it provides information on human features and functions which are basic to ergonomics or human factors engineering terms often used interchangeably it helps lay the foundations for teamwork among engineers and physiologists biologists and physicians bioengineering topics concern bones and tissues neural networks

biochemical processes bio and anthromechanics biosensors perception of information and related actions to mention just a few areas of common interest such understanding provides the underpinnings for devising work tasks tools workplaces vehicles work rest schedules human machine systems homes and designed environments so that we humans can work and live safely efficiently and comfortably

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they

represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy
