JNU

2020-10

we build infrastructure and everything else for a purpose which enables a service activity or capability all infrastructure has a purpose when we protect against harm it is the purpose that we are protecting when we know how to protect that purpose we know what we require of our infrastructure and can incorporate our protection approach and measures directly into the design when protection is inherent to the design of a system it is inherent to

the service activity or capability this more closely reflects how people behave and is more efficient than imposing security measures on system design protection and resilience go hand in hand with the same foundation in risk analysis when we understand this relationship we can forecast protection requirements over the life of the capability and design accordingly we can protect against the unknown by focusing on how failure affects the operations that we can control join marianne as she builds on her developing understanding of infrastructure risk and resilience and explores the protection and security of assets and capabilities encounters diverse perspectives and learns the meaning of social licence the threats she faces are not only project based and she must deal with real world challenges from colleagues and clients through her journey we learn the value of evidence based planning focusing on those aspects that we can control and spending the time to really understand why as much as what is being protected before the storm builds on the principles and concepts introduced in after the flood it is a clear and engaging exploration of protection planning for students industry practitioners or anyone interested in infrastructure business continuity security integration and emergency and risk management
