Science of Life

1977

until now the research of applied zooarchaeologists has not had a significant impact on the work of conservation scientists this book is designed to show how zooarchaeology can productively inform conservation science conservation biology and applied zooarchaeology offers a set of case studies that use animal remains from archaeological and paleontological sites to provide information that has direct implications for wildlife management and conservation biology it introduces conservation biologists to zooarchaeology a sub field of archaeology and ethnobiology and provides a brief historical account of the development of applied zooarchaeology the case studies which utilize palaeozoological data cover a variety of animals and environments including the marine ecology of shellfish and fish potential restoration sites for sandhill cranes freshwater mussel biogeography and stream ecology conservation of terrestrial mammals such as american black bears and even a consideration of the validity of the

pleistocene rewilding movement the volume closes with an important new essay on the history value and application of applied zooarchaeology by r lee lyman which updates his classic 1996 paper that encouraged zooarchaeologists to apply their findings to present day environmental challenges each case study provides detailed analysis using the approaches of zooarchaeology and concludes with precise implications for conservation biology essays also address issues of political and social ecology which have frequently been missing from the discussions of conservation scientists as the editors note all conservation actions occur in economic social and political contexts until now however the management implications of zooarchaeological research have rarely been spelled out so clearly
