Operations research a flagship journal leads the science of optimal decision making by seeking the most innovative and impactful work in the field. Operations research is a branch of applied mathematics that deals with the development of mathematical models and algorithms to solve complex optimization problems. Operational research focuses on advancing operational research management science or ms and analytics through theoretical insights, developments, and real-world case studies. It explores interactions of operations analytics with other relevant disciplines, such as economics, engineering, and computer science. Operational research or encompasses the development and the use of a wide range of problem-solving techniques and methods applied in the pursuit of improved decision-making and efficiency, such as simulation, mathematical optimization, queueing theory, and other stochastic process models, Markov decision processes, econometric models, and data analysis. The journal is committed to the rapid review and fast publication of short articles on all aspects of operations research and analytics. It welcomes pure methodological papers and applied papers with firm methodological grounding. All articles are restricted to at most eight views. Full aims and scope information is available at <http://www.blackwell-synergy.com/doi/full/10.1111/j.1475-3885.2019.01616.x>.
