can parents change or are they saddled with their present attitudes and habits does understanding of a child and his problems of growing up make any real difference in what parents actually do or in how the child matures many people today take a negative defeatist attitude toward those questions however there is a positive way of thinking about child growth and development we have sound psychological evidence that children learn under certain conditions when they feel a need for learning when the task is meaningful and appropriate to their ability when they can see results and when they experience satisfaction in the process and the product parents can consciously help to create these conditions this is especially true in helping the child learn to read parents not only can avoid creating situations in which the child becomes bored frustrated or resentful about reading they can also create situations in which the child can succeed with reasonable effort whatever his ability may be situations in which he can get some satisfaction from reading whether he reads a book of riddles an adventure story or fascinating facts about history or science in this book we have tried not to be prescriptive we do not want to sound like the voice of authority telling parents what to do about their child's reading our aim is to give parents a background of understanding that will help them to determine their own role in the reading development of their child many specific suggestions will be given as a reservoir of ideas from which parents may select any pattern or combination of patterns that seems appropriate to their child thus they will become more competent and confident in their rightful role as co workers with teachers in the formal aspects of their child's education

## ***Tom Thumb's Play-book, to Teach Children Their Letters as Soon as They Can Speak: Or, Easy Lessons for Little Children and Beginners***

1824

2015-07-24

as an early childhood professional teaching young children is an important function of your job you may not realize however that time spent teaching children results in learning opportunities of your own this collection of heartening classroom stories reflects the change growth and learning that happens when teachers take time to learn from children lessons shared are centered on themes of being the best teacher you can be helping children feel special and helping children learn in new ways each story is followed by the author s personal reflection on the event and the lasting impact it made you are invited to apply these stories to your own experiences as you realize the influence children have on your life these touching narratives will encourage support and challenge you to be a better person both at home and in the classroom learning from the children is an inspiring reminder that some of the biggest lessons come from the smallest teachers

## ***You Can Teach Your Child Successfully***

1988

school education the third volume of charlotte mason s homeschooling series consists of thoughts about the teaching and curriculum of children aged 9 12 either at school or at home she suggests that parents should practice what she calls masterly inactivity not neglectful or permissive parenting but simply allowing children to work things out for themselves do things for themselves learn from their own mistakes and to have time for free play and space for spontaneity charlotte mason education uses living books instead of dry textbooks in this book she discusses what kinds of books to look for in each subject and how to use them to teach children to love knowledge and become real readers and lifelong learners charlotte mason was a late nineteenth century british educator whose ideas were far ahead of her time she believed that children are born persons worthy of respect rather than blank slates and that it was better to feed their growing minds with living literature and vital ideas and knowledge rather than dry facts and knowledge filtered and pre digested by the teacher her method of education still used by some private schools and many homeschooling families is gentle and flexible especially with younger children and includes first hand exposure to great and noble ideas through books in each school subject conveying wonder and arousing curiosity and through reflection upon great art music and poetry nature observation as the primary means of early science teaching use of manipulatives and real life application to understand mathematical concepts and learning to reason rather than rote memorization and working endless sums and an emphasis on character and on

cultivating and maintaining good personal habits schooling is teacher directed not child led but school time should be short enough to allow students free time to play and to pursue their own worthy interests such as handicrafts

## ***School Education***

2013-05-20

this book tries to describe children in a few cases adults using their minds well learning boldly and effectively some of the children described are in school most are not yet old enough it is before they get to school that children are likely to do their best learning i believe and try to show here that in most situations our minds work best when we use them in a certain way and that young children tend to learn better than grownups and better than they themselves will when they are older because they use their minds in a special way in short children have a style of learning that fits their condition and which they use naturally until we train them out of it we like to say that we send children to school to teach them to think what we do all too often is to teach them to think badly to give up a natural and powerful way of thinking in favor of a method that does not work well for them and that we rarely use ourselves foreword

## **How Gertrude Teaches Her Children**

1898

1969

written by a respected internationally known math professional development professional and a language arts specialist this book will provide a teaching and learning resource book for teachers of children in kindergarten to grade 2 4 8 year olds that will help all children learn important mathematics based on the common core standards of mathematics and english language arts and reflects the knowledge and skills that young people need for success in college and careers rita janes and elizabeth strong are well versed in the theoretical underpinnings of using children s literature to teach young children number sense through investigations and problem solving tasks the book is based on the learning standards and practices in both the ccsm and the ccsla this very practical book will support teachers in integrating children s literature with meaningful mathematical learning experiences and provide a balance of procedural knowledge and understanding

## **Teach Them ALL to Read**

2009-07-15

an easy way to teach kids programming with guidance of teachers and parents our children carry far more immense mental abilities than we think just to reveal and explore them we need to know the tools and methodologies i had been observing some inspiring attempts that are aiming to teach programming to children however the thought of i am a father and why doesn t my son learn programming endorsed my soul initially i would think that it was early for him but on what circumstances we are discussing the children who catch tens of movements in the games and make decisions i have to admit i cannot do that in split of a second over a tabletpc in their hands it wasn t early for him it was late indeed my child could have started learning programming because they had that mental capability the missing piece in the puzzle is to introduce the appropriate tools with them first of all call it as programming coding or whatever it is one of the best application methods of mathematics just like application of real life it is the life itself whether you like or not math is a part of your life even the sentence of can i buy a kilogram of apple includes math programming is a way of application of math and it is one of the best ones because it includes problem solving thinking with multi dimensions observing and testing results getting excited and loving your creation being proud once you complete devoting for better organizing your work putting your best for your best in a nutshell it includes many things among life in other words just like maths programming is also an essential part of the life while we are making a plan for a vacation we are making a program and utilizing programming algorithms for our journey while we are organizing a wedding event we would be using a programming algorithm set during

studying to an exam we are using a likely approach for programming just like the moments of planning a meeting with a friend driving the marketing for a product and within all the planning of a meal and we apply those approaches to our life the lack we don't do is to convert those approaches into programming if we plan well we enjoy a beautiful vacation a happy wedding a good get together with a friend we achieve high sales with a good marketing plan a successful exam result that is what programming is programming defines how we manage our life it is a part of our daily life whether we like it or not even if we are not making professional coding programming we are making programming in our professions and think like a programmer if you are a good programmer your program consumes less resource and you become successful in what your business in a nutshell programming is not an optional occurrence in life it is the life itself we all make programming but we create their codes differently the biggest achievement in teaching children about how programming is done is to enable them figure those type of life skills and background with fun and swiftness pushing aside all the coding techniques contemplating over the programming and solution ways for the programming is a practice of programming and we benefit from it in every part of the life the rest is the technicality to convert them into codes there are so many programming languages to do that and all we have to do is to learn the syntax thinking all the possibilities and alternates and figuring out the most efficient is a practice of life just like in programming i decided to channel my 30 year know how and expertise into teaching children how to program for that objective where shall we start how can we make it lovable what tools should we use to teach and practice the programming how old should we make it start what is the best methodology i chased the answers of questions like the ones above while experimenting on that my son helped me a lot i noticed his approach and comments i observed the other children's approach with an honest wish to motivate and help all the children teachers and parents 1 computers 2 a brief overview to Blockly platform 3 a brief overview to Scratch platform 4 algorithms 5 loops 6 conditional clauses 7 functions and procedures 8 creating shapes and graphics 9 variables 10 lists and arrays 11 objects object oriented programming

## **Teaching Children to Read**

2023-07-18

children grow up to be adults the lessons they learn as children will be carried with them as they become students employees husbands and wives parents and grandparents if they learn the lessons when they're younger the mistakes in adulthood are less frequent and less disastrous some of those lessons learned in childhood relate to love work and values you teach your child the things that are important to you and the lessons you want them to learn to be successful happy and productive unfortunately one lesson that's often neglected is the lesson of money whether it's because parents don't feel confident talking about money or they don't think it's important many children grow up without money skills this isn't a lesson that you want to learn when you're an adult the consequences are too significant they include financial stress which can cause illness other consequences are debt no savings living paycheck to paycheck and a life that's more difficult than it needs to be as parents there is a responsibility to teach your child to be money smart

## **Can We Teach Children To Be Good?**

1988-06-01

this workbook expands upon the authors teaching children with autism to mind read a practical guide to present the most effective approaches strategies and practical guidelines to help alleviate social and communication problems in individuals with autism spectrum disorders asd complements the best selling teaching children with autism to mind read a practical guide for use in practical settings answers the need for more training of professionals in early interventions for children assessed with asd called for by the national plan for autism written by a team of experts in the field covers issues such as how to interpret facial expressions how to recognize feelings of anger sadness fear and happiness how to perceive how feelings are affected by what happens and what is expected to happen how to see things from another person's perspective and how to understand another person's knowledge and beliefs

## **Learn to Read from Sounds**

2004

this handbook for teachers students and parents provides information about training and providing opportunities for students to tutor younger students it shows how the learning process can benefit both tutor and student by going beyond the teacher led classroom to one that is more democratically organized peer teachers improve their grasp of the subject and younger children learn from those who truly speak their language in addition to increased learning and interest in learning peer tutoring allows classroom teachers to devote time to students who need more individualized attention and to teach analytic and human relations skills and imaginative uses of technology

## **Numbers and Stories**

2014-04-11

focuses on and teaches positive peer interaction by using motivational readers to teach children the importance of character building values while promoting beginning reading skills and strategies

## ***Coding For Kids***

2015-09-25

from an early age deaf children excel in thinking about and remembering what they learn through visual spatial instruction this strength in information processing can be used in the mathematics classroom to achieve better learning outcomes this book discusses ways to teach deaf children about the four arithmetic operations through spatial representation in problem solving examples for the teaching of fractions and graphs are also included these visual representations are useful to support the children s understanding of mathematical concepts and to promote peer collaboration the teaching programme was tested with deaf children in six schools with excellent results the children in the project made significantly more progress in one school year than expected for either deaf and hearing children over the same time this work was made possible through the generous support of the nuffield foundation

## **Money Smart Children**

2015-02-16

this book will be really useful to all teachers of upper primary lower secondary pupils but will be especially useful as a resource for using with gifted children of 9 to12 years as it will promote and support the type of self directed investigative enquiry that they enjoy the author also emphasises the importance of the research process rather than the written product which will appeal to all those children who dislike the written presentation of work each chapter outlines the learning outcomes has a timed teaching content and suggests a core activity it also suggests differentiation and includes some simple games it is fully supported by photocopiable resources making it a complete programme of work although written for a specific age group this is such an excellent basic guide it would be of use to anyone conducting research for the first time eve wilson education consultant national association for gifted children this inspirational and innovative programme will be welcomed by all those who want to teach research skills to children clear discussion notes activities and games provide everything a busy teacher needs to be able to deliver the programme no prior knowledge of research is necessary this is an ideal resource for those who want to offer pupils the opportunity to make their voice heard through the research process dr ruth macconville head of sens london borough of ealing an excellent book a very informative guide to supporting teachers in delivering a comprehensive research training package to children and young people children society why teach research methodology to children an effective and meaningful way of enhancing children s learning doing research empowers children to participate actively in their own education and to make original contributions

to knowledge the research carried out by children is also a vital key to improving our own understanding of children and childhood this book s unique child centred perspective provides an easy to follow model for teaching research methodology to children aged 10 and upwards packed with practical tips and photocopyable resources for the classroom each chapter contains a core activity designed to distil the teaching content and engage children with the main learning objectives ideas for supplementary activities and games follow up homework mini boxed glossaries containing key research terms and their definitions and suggestions for further reading key topics covered include research design data collection techniques data analysis dissemination and children as active researchers
