Development and Field Test of Psychophysical Tests for DWI Arrest. Final Report

1981

the typical dwi case usually begins with a police officer pulling someone over for a traffic violation such as speeding swerving or even something as serious as a traffic accident dwi police officers usually will then notice that the driver has an odor of alcohol on their breath bloodshot and watery eyes and slurred speech you are asked to step out of their car to perform field sobriety tests you are now a suspect in a dwi investigation normally three roadside field sobriety tests are given 1 the horizontal gaze nystagmus test 2 the walk and turn test and 3 the one leg stand test as the suspect is doing these tests the police officer is keeping score but never reveals the criteria used to score the performance the suspect also does not get credit for doing something correctly the suspect is not given to a practice run just when you think you passed the 3 tests with flying colors the police officer arrests you and takes you downtown where you either give a breath test or a blood test now you are being charged with a dwi upon being booked you now have criminal records that are available to the public how did this happen and what do i do now well you go get yourself a lawyer and you need a damn good one because your career your record and your reputation are on the line

Psychophysical Tests for DWI Arrest

1977

this book and set of accompanying cassettes is intended to act as a communication tool for law enforcement personnel it employs the use of the anticipatory language learning method a l l which emphasizes pronunciation listening skills and control
