with a n kaufman and k m watson on the stability of the pinch as well as a paper on chandrasekhar s own approach to the topic of adiabatic invariants part 2 includes work with specific scientific applications of hydrodynamic and hydromagnetic stability not covered in his monograph on the subject the final part contains chandrasekhar s papers on the scientific applications of the tensor virial theorem in which he restores to its proper place riemann s neglected work with ellipsoidal figures this is the first of six volumes collecting significant papers of the distinguished astrophysicist and nobel laureate s chandrasekhar his work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research the result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area volume 1

stellar structure and stellar atmospheres covers primarily the period 1930-40 and includes early papers on the theory of white dwarfs in the preface Chandrasekhar explains the criteria for selection and provides historical background each subsequent volume will include a foreword by an authority on the topics covered some vols 1920-1949 contain collections of papers according to subject the theory of nonlinear oscillations and stability of motion is a fundamental part of the study of numerous real world phenomena these phenomena particularly auto oscillations of the first and second kind capture parametric subharmonic and ultraharmonic resonance asymptotic behavior and orbits stability constitute the core of problems treated in nonlinear mechanics and their study is connected with the names of H. Poincaré, A. M. Lyapunov, N. M. Krylov and N. N. Bogolyubov Professor Demetrios Magiros a widely known scientist in the theories of oscillations and nonlinear differential equations has devoted his numerous works to this significant part of modern physical science his scientific results can be classified in the following

way i creation of methods of analysis of subharmonic resonances under the nonlinear effect 2 determination and analysis of the main modes of nonlinear oscillations on the basis of infinite determinants 3 analysis of problems of celestial mechanics 4 classification of stability of solutions of dynamic systems concepts 5 mathematical analogs of physical and social systems he has developed new methods and solutions for a great number of difficult problems of nonlinear mechanics making a significant contribution to the theory and applications of the field urgency depth of perception of the considered phenomena and practical directness are characteristics of his work this book constitutes the proceedings of the international conference on information computing and applications held in tangshan china in october 2010 twenty six essays which present a comprehensive account of the importance of fundamental and applied research which benefits not only new zealand but the rest of the world stpm past year question and solutions sorted by year from 2013 to 2018 includes proceedings of member

institutes of the society and of the society's science congress  
through v 84 1956 57 safety and reliability theory and  
applications contains the contributions presented at the 27th  
european safety and reliability conference esrel 2017  
portoro□ slovenia june 18 22 2017 the book covers a wide  
range of topics including accident and incident modelling  
economic analysis in risk management foundational issues in  
risk assessment and management human factors and human  
reliability maintenance modeling and applications  
mathematical methods in reliability and safety prognostics  
and system health management resilience engineering risk  
assessment risk management simulation for safety and  
reliability analysis structural reliability system reliability and  
uncertainty analysis selected special sessions include  
contributions on the marie sk□odowska curie innovative  
training network in structural safety risk approaches in  
insurance and finance sectors dynamic reliability and  
probabilistic safety assessment bayesian and statistical  
methods reliability data and testing organizational factors and

safety culture software reliability and safety probabilistic methods applied to power systems socio technical economic systems advanced safety assessment methodologies extended probabilistic safety assessment reliability availability maintainability and safety in railways theory practice big data risk analysis and management and model based reliability and safety engineering safety and reliability theory and applications will be of interest to professionals and academics working in a wide range of industrial and governmental sectors including aeronautics and aerospace automotive engineering civil engineering electrical and electronic engineering energy production and distribution environmental engineering information technology and telecommunications critical infrastructures insurance and finance manufacturing marine industry mechanical engineering natural hazards nuclear engineering offshore oil and gas security and protection transportation and policy making titles of chemical papers in british and foreign journals included in quarterly journal v 1 12 this special issue covers symmetry and

asymmetry phenomena occurring in real life problems we invited authors to submit their theoretical or experimental research presenting engineering and economic problem solution models dealing with the symmetry or asymmetry of different types of information the issue gained interest in the research community and received many submissions after rigorous scientific evaluation by editors and reviewers nine papers were accepted and published the authors proposed different madm and modm solution models as integrated tools to find a balance between the components of sustainable global development to find a symmetry axis concerning goals risks and constraints to cope with the complicated problems most approaches suggested decision models under uncertainty combining the usual decision making methods with interval valued fuzzy or rough sets theory also z numbers the application fields of the proposed models involved both problems of technological sciences and social sciences the papers cover three essential areas engineering economy and management we hope that a summary of the

special issue as provided here will encourage a detailed analysis of the papers included in the printed edition in these selections readers are treated to a rare opportunity to see the world through the eyes of one of the twentieth century s most brilliant and sensitive scientists conceived by chandrasekhar as a supplement to his selected papers this volume begins with eight papers he wrote with valeria ferrari on the non radial oscillations of stars it then explores some of the themes addressed in truth and beauty with meditations on the aesthetics of science and the world it examines highlights include the series paintings of claude monet and the landscape of general relativity the perception of beauty and the pursuit of science on reading newton s principia at age past eighty and personal recollections of indira gandhi jawaharlal nehru and others selected papers volume 7 paints a picture of chandra s universe filled with stars and galaxies but with space for poetics paintings and politics the late s chandrasekhar was best known for his discovery of the upper limit to the mass of a white dwarf star for which he received

the nobel prize in physics in 1983 he was the author of many books including the mathematical theory of black holes and most recently newton s principia for the common reader extensively researched this book traces the life and work of abraham de moivre as well as the state of probability and statistics in eighteenth century britain it is the first extensive biography of de moivre and is based on recently discovered material and translations including some of de moivre s letters the book begins with discussions on de moivre s early life in france and his initial work in pure mathematics with some excursions into celestial mechanics it then describes his fundamental contributions to probability theory and applications including those in finance and actuarial science the author explores how de moivre s wide network of personal and professional connections often motivated his research the book also covers de moivre s contemporaries and his impact on the field written in a clear approachable style this biography will appeal to historians and practitioners of the art of probability and statistics in a wide range of

applications including finance and actuarial science
