british generals in blair s wars is based on a series of high profile seminars held in oxford in which senior british officers predominantly from the army reflect on their experience of campaigning the chapters embrace all the uk s major operations since the end of the cold war but they focus particularly on iraq and afghanistan as personal testimonies they capture the immediacy of the authors thoughts at the time and show how the ideas of a generation of senior british officers developed in a period of rapid change against a background of intense political controversy and some popular unease the armed forces were struggling

to revise their cold war concepts and doctrines and to find the best ways to meet the demands placed upon them by their political leaders in what was seen to be a new world order it was a time when relations between the government of the day and the armed services came under close scrutiny and when the affection of the british public for its forces seemed to grow with the difficulty of their operational tasks this is a truly unique and invaluable book for the first time we are offered first hand testimony about britain s involvement in recent campaigns by senior participants in addition to touching on themes like civilian military relations the operational direction of war and relationships with allies these eyewitness accounts give a real sense of how the character of a war changes even as it is being fought it will be essential reading for those in military academies and staff colleges not only in britain but throughout nato and especially in the usa it also has profound policy implications as both the uk and nato more generally reassess their strategies and the value of intervention operations it will also become a primary source for historians and students of the wars in iraq and afghanistan in particular

i think the success of the 354th as the leading group in the european theatre for aerial victories is due to several things first was the initial training of the squadrons before deployment to england colonel ken martin nurtured the group from its infancy and all the excellence that later showed through could be placed at his doorstep despite his youth he knew how to foster teamwork and demand perfection in flying there was nothing more important than getting the group off on the right foot second our pilots were taught to fly mutual support and practised it faithfully there were no hot pilots in the 354th only excellent pilots third men like glenn eagleston gave advice and warnings about combat tactics and guarding one s tail this prepared our pilots for lurking dangers something the other groups may not have done brigadier general james howard commanding officer of the 354th fighter group

according to the centers for disease control and prevention cdc there were nearly 40 000 opioid related deaths in the u s in the last year alone these numbers have increased considerably for a variety of reasons and the growing role of prescription drug abuse has been widely recognized there has also been increasing consciousness of the lack of dedicated and formalized training dedicated to prescription of analgesics particularly among surgical trainees and practicing surgeons recent studies demonstrate that only a small minority of training programs mandates any opioid prescribing education despite the fact that nearly all programs allow trainee prescription of opioids on an outpatient basis therefore it is not surprising that despite a growing body of literature illustrating the value of opioid alternatives and adjuncts practicing surgeons in all specialties largely ignore these evidence based practices and continue to prescribe opioids in situations for which alternatives are proven safe and effective there are many reasons for preparing a concise and practical resource describing evidence based practices targeting surgeons and surgical subspecialists including but not limited to 1 the exponential increase in prescription drug abuse associated with the opioid epidemic as surgeons play an important role in managing perioperative and chronic pain in a variety of practice setting this issue bears importance from the patient physician and policymaker standpoint 2 with increasing recognition of the role of quality improvement in patient safety initiatives and literature demonstrating inadequate opioid prescribing education ope in surgical training programs it is only a matter of time before accreditation bodies including the acgme incorporate strong recommendations and mandates for ope 3 myriad literature demonstrating the existence of evidence based alternatives to opioids all surgeons and surgical subspecialists would benefit from a practical guide concisely laying this literature out we feel that surgeons of all experience levels may

benefit ranging from the first year surgical intern to an experienced practitioner trying to remain compliant with the evolving opioid regulatory environment hence the appropriate target audience for this text would be for the tens of thousands of current surgical trainees in many specialties including general surgery thoracic surgery otolaryngology plastic surgery urology gynecology vascular surgery neurosurgery and orthopedic surgery furthermore surgeons out of training would be another audience of interest as there are increasing courses for continuing medical education based on perioperative and chronic pain management currently there are no comparable and competitive guides with these target audiences all of the existing literature about perioperative and chronic pain is targeted either specifically for patients anesthesiologists or pain medicine physicians this will be the only up to date guide focusing on evidence based practices for perioperative pain control and each section will also include information on chronic pain sequelae relevant to each surgical specialty the editors envision this text being an interdisciplinary endeavor incorporating surgeons from multiple specialties anesthesiologists pain medicine physicians and palliative physicians as appropriate

this book addresses the vital importance of reshoring us manufacturing capability to ensure economic and military security and then discusses the proven methods that the united states used to gain manufacturing supremacy in the first place the vital takeaway is if the job can be made sufficiently productive the per unit labor cost ceases to be relevant which means a business can pay high wages realize high profits and deliver low prices simultaneously the contest is then not between high wages and cheap labor but between efficiency and inefficiency and when automation is involved machine against machine readers will

be able to put these principles to work very quickly to achieve tangible results the relatively low federal minimum wage has meanwhile become a major issue but inflation skyrocketed in the second quarter of 2022 when higher wages and higher demand for goods and services were not matched with higher productivity the book addresses the relationship between the money supply and the velocity of money to prices wages and productivity a manufacturing resurgence in the united states will not only increase our standard of living enormously but generate taxable economic activity that will help pay down rather than increase the federal debt higher productivity also delivers a greater supply of goods to accompany higher wages and thus works against inflation this can prevent looming recessions and disruptions
