cost is considered a crucial factor in much decision making in private and public organisations therefore the ability to calculate total estimated costs for different alternatives is important however such total cost analysis is a challenging task providing students with the knowledge and skills needed for total cost analysis is therefore relevant in several disciplines within higher education within logistics management total cost analysis is for decades by several scholars regarded as a cornerstone a fundamental part of the discipline however except for describing the basic steps and presumptions the literature does not give much support concerning how to conduct such analyses or which the difficulties associated with total cost analysis are this blank space in literature is not limited to the logistics discipline it stretches throughout many disciplines neither does literature cover how to teach to support students learning of total cost analysis hence to address the lack of research the purpose of this thesis was formulated as follows to contribute to the understanding of conducting

learning and teaching total cost analysis three research questions were shaped to address each part of the purpose conducting learning and teaching rq1 what challenges are connected to the process of conducting total cost analysis rq2 what thresholds are there for learning how to conduct total cost analysis rq3 how can total cost learning be supported by suitable educational methods the research questions are connected to each other in the sense that the challenges of conducting total cost analysis rq1 indicate within which areas total cost learning is difficult and thereby where thresholds are to be investigated rq2 further knowledge about the learning thresholds is needed to discuss suitable educational activities rq3 the research was conducted by a combination of literature reviews and multiple case studies at four higher education institutions where both teachers and students were approached the findings for rq1 were developed in an abductive procedure walking back and forth between literature and cases a twelve step process for total cost analysis was defined and specific challenges associated for each of these steps regarding learning thresholds rq2 perceived difficulties with learning total cost analysis were identified in the case studies these difficulties were then analysed against threshold characteristics available in literature this resulted in the identification of four total cost learning thresholds literature on constructivist based teaching was used to suggest teaching methods to support learning rq3 these types of activities proved to match the ones most appreciated by teachers and students in the studied cases the twelve step process provides a more structured and holistic view of total cost analysis than previously available in the logistics literature the description of challenges with conducting total cost analysis is novel not only within logistics but also generally why this is a major contribution from this research aspects regarding teaching and learning connected to logistics and to total cost analysis are very sparsely addressed in literature which makes the findings concerning learning thresholds and teaching methods valuable the findings are believed to be useful for different stakeholders first and foremost teachers can use the findings for designing programs courses and course modules which cover the important aspects of total cost analysis with help from educational activities supporting the students learning second for organisations where total cost analyses are conducted the suggested process with its steps and associated challenges can be used to achieve better total cost analyses and in turn more substantiated decisions in the longer perspective better education on total cost analysis at higher education institutions will further strengthen the total cost competence in organisations thereby improving the total cost related decision making total cost analysis is not unique for the logistics discipline although focus in the study has been on higher education institutions providing logistics courses the findings are to a high extent believed to be relevant also for other disciplines dealing with total cost analysis

## **The African Book Publishing Record**

2008

this book looks at the sources and composition of the atmosphere and rainfall with particular attention on acidifying components and those that affect ecosystems it further widens the subject to look at trace metals it includes papers on the impact of deposition on soils and forests and the recovery of the natural environment work on critical loads makes a contribution to understanding the degree to which deposition must be reduced to limit its impact

increasing life expectancy in south asia is resulting in a demographic transition that can under the right circumstances yield dividends through more favorable dependency ratios for a time with aging the disease burden shifts toward noncommunicable diseases ncds which can threaten healthy aging however securing the gains expected from the demographic dividend where developing countries working and nondependent population increases and per capita income thus rises is both achievable and affordable through efficiently tackling ncds with

prevention and control efforts this book looks primarily at cardiovascular disease cvd and tobacco use since they account for a disproportionate amount of the ncd burden the focus is strategic rather than comprehensive the goal of this book is to encourage countries to develop adopt and implement effective and timely country and where appropriate regional responses that reduce both population level risk factors and the ncd burden the work develops i an ncd burden and risk factor profile for all countries and the region as a whole ii a rationale for public policy and action for ncds iii a framework to guide the formulation of public policies and strategies for ncds iv a country profile including capacity and ongoing ncd activities as well as policy options and actions for ncds that will help stimulate policy dialogue within and among countries and v a regional strategy for ncd prevention and control where regional collaboration offers added value the achievements of this book are i developing a framework for policy options to identify key areas for strategic country and regional level policy and actions ii bringing together demographic and aging trends disease and risk factor burden data alongside analyses of capacities and accomplishments to tackle ncds and iii using these inputs to develop policy options for country and regional strategies

## Handbook of Intuition Research

2011-01-01

the subject of personality what makes each of us unique and different from one another has long been a topic of universal fascination from a medical perspective research on personality disorders has expanded with the advent of standardized diagnostic systems this continuing and increased activity and progress in the field spurred the development of this third edition of the american psychiatric association publishing textbook of personality disorders with an emphasis on updating the information most relevant to clinicians this new edition features contributions from established experts in the field as well as a new generation of scientists dozens of tables illustrative figures and real life case examples summarize the vast data that continue to accumulate in five key areas clinical concepts including theories of personality disorders as well as their manifestations assessment and diagnosis this opening section also describes the alternative dsm 5 model for personality disorders in detail risk factors for and the etiology and impact of personality disorders this section of the book examines data on prevalence sociodemographics and levels of functional impairment associated with personality disorders it offers both a developmental and a genetic neurobiological perspective and describes the symptomatic and functional outcomes of personality disorders treatment options across therapeutic modalities a new cutting edge chapter argues for the early identification of borderline psychopathology in children and young adolescents in an effort to prevent full blown disorder later in life additional chapters delve into an array of individual psychotherapies pharmacotherapeutic options and group family and couples therapies guidance on forming and maintaining a therapeutic alliance and on avoiding boundary violations in treating patients with personality disorders is provided special problems populations and settings including suicide substance use disorders antisocial behavior personality pathology in general medical settings and personality disorders among active duty military the usefulness of translational research to deepen understanding of the biopsychosocial nature of the personality disorders particularly borderline personality disorder this comprehensive textbook is an essential resource for clinicians looking to stay on the vanguard of a rapidly growing field
