the importance of osteoporosis in the united kingdom as a cause of death and disability is now well recognised there are in excess of 200 000 osteoporotic related fractures in the uk per annum associated with an estimated cost of 942 000 000 following hip fracture it is known that about 50 of patients are unable to live independently and about 20 of such patients die within the first 6 months these figures compelling as they are reflect poorly on current medical practices which manifestly have failed to identify patients with low bone density at risk of fracture the hope is that the technical advances which have enabled bone mineral density and other allied indices to be measured with high precision and accuracy offers the chance of identifying patients at risk of fracture and guiding the clinician to make treatment decisions which may reduce the patients risk of fracture in the uk services for identifying patients at risk of fracture are still in their infancy and are not uniformly available throughout the country this situation is however likely to improve particularly following the publication of the royal college of physicians report osteoporosis clinical guidelines for prevention and treatment and the recognition in our healthier nation that osteoporosis prevention should be included as a target to achieve a reduction of 20 in accidents by 2010

precision and accuracy are terms that are used in quantitative scientific fields to describe the reproducibility of a measurement or the capacity of a measurement to quantify the actual biological matter present precision and accuracy are also important applications in the quality control and quality assurance of the performance and interpretation of bone mass measurements precision and accuracy also reflect the values and qualities of the author of this important text in the clinical application of bone densitometry this is the first textbook of its kind devoted entirely to the proper use of this technology in the practice of medicine dr sydney l bonnick has devoted a majority of her career helping to define excellence in this exploding area and in doing so has earned the respect and admiration of the international bone densitometry community confusion abounds in this field due to the proliferation of bone densitometry devices including the various models that can measure many skeletal sites the different normative data bases used and the establishment of diagnostic categories of low bone mass dr bonnick's authoritative and carefully referenced text will certainly clarify and broaden the knowledge of those physicians who currently perform bone densitometry this text is designed to be utilized by a wide range of medical specialists endocrinologists rheumatologists gynecologists radiologists orthopedic surgeons and nephrologists

logic programming enjoys a privileged position it is firmly rooted in mathematical logic yet it is also immensely practical as a growing number of users in universities research institutes and industry are realizing logic programming languages specifically prolog have turned out to be ideal as prototyping and application development languages this volume presents the proceedings of the second logic programming summer school lpss 92 the first logic programming summer school lpss 90 addressed the theoretical foundations of logic programming this volume focuses on the relationship between theory and practice and on practical applications the introduction to the volume is by r kowalski one of the pioneers in the field the following papers are organized into sections on constraint logic programming deductive databases and expert systems processing of natural and formal languages software engineering and education

cytology refers to a branch of pathology that deals with making diagnoses of diseases and conditions through the examination of tissue samples from the body medicinenet.com immunocytochemistry is a laboratory method that uses antibodies to check for certain antigens markers in a sample of cells the antibodies are usually linked to an enzyme or a fluorescent dye after the antibodies bind to the antigen in the cell sample the enzyme or dye is activated and the antigen can then be seen under a microscope immunocytochemistry is used to help diagnose diseases such as cancer it may also be used to help tell the difference between different types of cancer national cancer institute this book is a comprehensive guide to the techniques and application of immunocytochemistry in cytology divided into two parts the first section discusses basic principles and preparation techniques and quality control and automated immune staining section two covers diagnostic applications of immunocytochemistry for many different types of tumour the text is highly illustrated with microphotographs tables and boxes to assist learning and interpretation of findings for accurate diagnosis key points comprehensive guide to techniques and application of immunocytochemistry in cytology provides thorough understanding of basic principles and methods covers diagnostic applications for many different types of tumour highly illustrated with microphotographs tables and boxes

the brain functions within an internal environment that is determined and controlled by morphological structures and cellular mechanisms present at interfaces between the brain and the rest of the body in vertebrates these interfaces are across cerebral blood vessels blood brain barrier choroid plexuses blood cerebrospinal fluid barrier and pia arachnoid there is a csf brain barrier in the neuroepithelium lining the ventricular system that is only present in embryos there is now substantial evidence that many brain barrier mechanisms develop early and that in some cases they are functionally more active and even more specialized compared to adult barriers therefore barriers in developing brain should be viewed as adapted appropriately for the growing brain and not as is still widely believed immature considerable advances in our understanding of these barrier mechanisms have come from studies of the developing brain and invertebrates a striking aspect to be highlighted in this special edition is that many of the molecular mechanisms in these very diverse species are similar despite differences in the cellular composition of the interfaces this frontiers topic comprises articles in three sections original studies reviews and myths misconceptions original articles provide new information on molecular and cellular barrier mechanisms in developing brains of primates including human embryos bröchner et al ek et al errede et al rodents bauer et al liddelow strazielle gherzi egea saunders et al wish et al chick bueno et al and zebrafish henson et al as well as studies in drosophila hindle bainton de salvo et al limmer et al the reviews section includes evolutionary perspectives of the blood brain and blood csf barriers bueno et al bill korzh there are also detailed reviews of the current state of understanding of different

interfaces and their functional mechanisms in developing brain bauer et al strazielle gjeri egea liddelow richardson et al errede et al henson et al brøchner et al and in invertebrates hindle bainton de salvo et al limmer et al different aspects of the relationship between properties of the internal environment of the brain and its development are discussed stolp molnar johansson prasongchean et al a neglected area namely barriers over the surface of the brain during development is also covered brøchner et al clinically related perspectives on barrier disruption in neonatal stroke are provided by kratzer et al and other aspects of dysfunction by morretti et al and by palmeta et al on the continuing problem of bilirubin toxicity progress in this field is hampered by many prevailing myths about barrier function combined with methodologies that are not always appropriately selected or interpreted these is covered in the misconceptions myths and methods section including historical aspects and discussion of the paracellular pathway a central dogma of epithelial and endothelial biology saunders et al and a review of markers used to define brain barrier integrity in development and in pathological conditions saunders et al use of inappropriate markers has caused considerable confusion and unreliable interpretation in many published studies torbett et al deal with the complexities of the new field of applying proteomics to understanding blood brain barrier properties as do huntley at al with respect to applying modern high throughput gene expression methods huntley et al the editorial summarizes the contributions from all authors this includes mention of some the main unanswered but answerable questions in the field and what the impediments to progress may be
