si base unit the si base units are the standard units of

measurement defined by the international system of units si  
for the seven base quantities of what is now known as the  
international system of quantities they are notably a basic set  
from which all other si units can be derived the units and their  
physical quantities are the second  $\text{m}^3 \text{s}^{-1} \text{kg}^{-1} \text{m}^{-3} \text{s}^{-1}$   $\text{m}^3$

The International System of Units (SI) is the most widely used system of measurement. It is based on seven base units: the second (s) for time, the metre (m) for length, the kilogram (kg) for mass, the ampere (A) for electric current, the kelvin (K) for temperature, the mole (mol) for amount of substance, and the candela (cd) for luminous intensity. These base units are used to derive other units of measurement.
