this preface tells the story of how multimodal usability responds to a special challenge chapter 1 describes the goals and structure of this book the idea of describing how to make multimodal computer systems usable arose in the european network of excellence similar taskforce for cre ing human machine interfaces similar to human human communication 2003 2007 similar cc similar brought together people from multimodal signal processing and usability with the aim of creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes most of our colleagues in the network were in fact busy extracting features and guring out how to demonstrate progress in working interactive systems while claiming not to have too much of a notion of usability in system development and evaluation it was proposed that the authors support the usability of the many multimodal pro types underway by researching and presenting a methodology for building usable multimodal systems we accepted the challenge rst and foremost no doubt because the formidable team spirit in similar could make people accept outrageous things second h ing worked for nearly two decades on making multimodal systems usable we were curious curious at the opportunity to try to understand what happens to traditional usability work that is work in human computer interaction centred around tra tional graphical user interfaces guis when systems become as multimodal and as advanced in other ways as those we build in research today

1930

bioconjugate techniques is the essential guide to the modification and crosslinking of biomolecules for use in research diagnostics and therapeutics it provides highly detailed information on the chemistry reagent systems and practical applications for creating labeled or conjugate molecules it also describes dozens of reactions with details on hundreds of commercially available reagents and the use of these reagents for modifying or crosslinking peptides and proteins sugars and polysaccharides nucleic acids and oligonucleotides lipids and synthetic polymers armed with this information and the abundant protocols provided readers will form unique complexes that can be used for detecting quantifying and targeting important analytes this book helps readers make high activity antibody enzymes conjugates immunotoxins immunogen complexes liposome conjugates as well as biotinylated molecules avidin or streptavidin conjugates colloidal gold labeled proteins peg or dextran complexes labeled oligonucleotide probes and fluorescently tagged or radiolabeled molecules this book is the first to thoroughly capture the entire field of bioconjugate chemistry in a single volume serves as a practical guide to modification and cross

linking technology for research diagnostics and therapeutics provides useful detailed easy to follow step by step protocols contains easy to read and easy to understand key concepts for making bioconjugates of all types efficiently covers the chemistry of bioconjugation the major reagents available for modification and cross linking and the application of these reagents to the synthesis of highly active conjugates cites over more than references keyed to concepts covered in the book uses more than 600 figures to illustrate bioconjugate reagents their reactions and applications suggests sources for all key reagents
