with improved control of most environmental causes of disease genetic illness has assumed a primary importance in the causation of handicap and mortality in all age groups at present effective therapy is available for relatively few genetic conditions and prenatal diagnosis is an important option for couples at high risk the task of providing prenatal diagnosis for these couples requires a team approach between clinicians and scientists and is complicated by the large number of diverse conditions and by the rapid developments in the field both obstetric in relation to imaging and tissue sampling methods and genetic in relation to techniques for analysis against this background the aim of the symposium was to provide an overview of the current status of prenatal and perinatal diagnosis of inborn errors of metabolism the format consisted of the usual mixture of specific invited overviews and free communications in either oral or poster form the invited overviews as can be seen from this publication covered a wide range from accepted methods for neonatal diagnosis and screening to newer techniques for prenatal diagnosis and likely future developments with respect to gene therapy similarly the oral com munications included reviews of experience with biochemical analysis of chorionic villus sampling from major centres more specific examples of progress towards the basic defect in batten s disease and canavan s disease and prospects for effective therapy in menkes disease and a lipid myopathy

we have taught plant molecular biology and biotechnology at the undergraduate and graduate level for over 20 years in the past few decades the field of plant organelle molecular biology and biotechnology has made immense strides from the green revolution to golden rice plant organelles have revolutionized agriculture given the exponential growth in research the problem of finding appropriate textbooks for courses in plant biotechnology and molecular biology has become a major challenge after years of handing out photocopies of various journal articles and reviews scattered through out the print and electronic media a serendipitous meeting occurred at the 2002 iatpc world congress held in orlando florida after my talk and evaluating several posters presented by investigators from my laboratory dr jacco flipsen publishing manager of kluwer publishers asked me whether i would consider editing a book on plant organelles i accepted this challenge after months of deliberations primarily because i was unsuccessful in finding a text book in this area for many years i signed the contract with kluwer in march 2003 with a promise to deliver a camera ready textbook on july 1 2004 given the short deadline and the complexity of the task i quickly realized this task would need a co editor dr christine chase was the first scientist who came to my mind because of her expertise in plant mitochondria and she readily agreed to work with me on this book

the book considers issues relating to accountability in social research by juxtaposing seven ways of approaching the issues and by moving toward the development of a particular approach to the earning of trust on the part of researchers a conception of the practice and assessment of discursive accountability is presented as an option for consideration the book grapples with the issue of accountability in social research by considering the extent to which and ways in which it is addressed in a number of different positions regarding the practice of social science the focus of the book is on reviewing discourses around the practice of professional inquiry with a view to highlighting differing arguments around the question of what it might mean to assess researchers accountabilities the book is structured around considering in detail various views on accountability in relation to one another a comprehensive comparison of arguments is presented in the first two chapters of the book the debate that is set up in the first two chapters forms the background to the elaboration and development in chapter 3 of constructivist argumentation in relation to the question of how accounts as set forth by researchers should be treated by colleagues participants and other audiences the continuing debate about the status to be afforded to constructions developed by researchers is tackled in this chapter constructivist thinking is then extended toward what is named in the book a trusting constructivist position this position focuses on ways in which trust earning and trust awarding in the context of social inquiry can proceed without researchers having to justify themselves as striving to gain access to knowledge as representation of reality through the development of the trusting constructivist position the book explores ways of creating trust through processes of social discourse an assessment of actual research projects in view of the debates set up in earlier chapters then takes place through these assessments readers can relate the details of the arguments developed in earlier chapters to their implications for judging the practice of accountable social inquiry
