# **Fixed Point Theory and Its Applications**

1988

fixed point theory touches on many areas of mathematics such as general topology algebraic topology nonlinear functional analysis and ordinary and partial differential equations and serves as a useful tool in applied mathematics this book represents the proceedings of an informal three day seminar held during the international congress of mathematicians in berkeley in 1986 bringing together topologists and analysts concerned with the study of fixed points of continuous functions the seminar provided a forum for presentation of recent developments in several different areas the topics covered include both topological fixed point theory from both the algebraic and geometric viewpoints the fixed point theory of nonlinear operators on normed linear spaces and its applications and the study of solutions of ordinary and partial differential equations by fixed point theory methods because the papers range from broad expositions to specialized research papers the book provides readers with a good overview of the subject as well as a more detailed look at some specialized recent advances

this book describes detection techniques used to search for and analyze gravitational waves gw it covers the whole domain of gw science starting from the theory and ending with the experimental techniques both present and future used to detect them the theoretical sections of the book address the theory of general relativity and of gw followed by the theory of gw detection the various sources of gw are described as well as the methods used to analyse them and to extract their physical parameters it includes an analysis of the consequences of gw observations in terms of astrophysics as well as a description of the different detectors that exist and that are planned for the future with the recent announcement of gw detection and the first results from lisa pathfinder this book will allow non specialists to understand the present status of the field and the future of gravitational wave science

a unitary reflection is a linear transformation of a complex vector space that fixes each point in a hyperplane intuitively it resembles the transformation an image undergoes when it is viewed through a kaleidoscope or an arrangement of mirrors this book gives a complete classification of all finite groups which are generated by unitary reflections using the method of line systems irreducible groups are studied in detail and are identified with finite linear groups the new invariant theoretic proof of steinberg s fixed point theorem is treated fully the same approach is used to develop the theory of eigenspaces of elements of reflection groups and their twisted analogues this includes an extension of springer s theory of regular elements to reflection cosets an appendix outlines links to representation theory topology and mathematical physics containing over 100 exercises ranging in difficulty from elementary to research level this book is ideal for honours and graduate students or for researchers in algebra topology and mathematical physics book jacket
