Development and Modern Industrial Policy in Practice 2016-04-29

does what economies export matter for development if so can industrial policies improve on the export basket generated by the market this book approaches these questions from a variety of conceptual and policy viewpoints reviewing the theoretical arguments in favor of industrial policies the authors first ask whether existing indicators allow policy makers to identify growth promoting

sectors with confidence to this end they assess and ultimately cast doubt upon the reliability of many popular indicators advocated by proponents of industrial policy second and central to their critique the authors document extraordinary differences in the performance of countries exporting seemingly identical products be they natural resources or high tech goods further they argue that globalization has so fragmented the production process that even talking about exported goods as opposed to tasks may be misleading reviewing evidence from history and from around the world the authors conclude that policy makers should focus less on what is produced and more on how it is produced they analyze alternative approaches to picking winners but conclude by favoring horizontal ish policies for instance those that build human capital or foment innovation in existing and future products that only incidentally favor some sectors over others

Industrial Policy American-style: From Hamilton to HDTV **2016-09-16**

what has been the role of government industrial policy through agencies such as miti in japan s extraordinary post war development how has the role changed in successive phases of growth what lessons can be learned from this experience by other nations be they in the west or developing countries or economies in transition attempting to introduce competitive market structures these are some of the main questions addressed in this absorbing and thorough study dividing the period into three main phases the author shows that policy played a crucial role in the initial period of post war recovery it did so not by picking winners but by creating a stable base from which development could occur by spreading the cost of introducing market competition over time in the succeeding high growth period and more recently japan s industrial policy attempts only to promote the

development of new technology and smooth the decline of sectors that are no longer globally competitive that japan itself no longer practises industrial policy on a wide scale is an irony little appreciated by those advocating the adoption of a japan style industrial policy elsewhere
