technical design is a process of creating a technical design document (TDD) or design specification that outlines the architectural and technical aspects of a software system. It serves as a roadmap for the development team, providing a clear understanding of the system's design.

A technical designer is responsible for translating the design vision into a feasible and efficient technical solution. They create prototypes, wireframes, mockups, and a technical design document (TDD) also known as a design specification or design blueprint.

The TDD is a comprehensive document that outlines the architectural and technical aspects of a software system. It serves as a roadmap for the development team, providing a clear understanding of the system's design.

Technical design includes usability, functionality, and product design. It is a key component of industrial design and experience design.

This guide covers 7 technical design skills that have been working on a set of articles around experience design, addressing growth plans for designers and thoughts on continuous research.

The guide also includes a technical specification document that outlines how you're going to address a technical problem by designing and building a solution for it. It is also referred to as a technical design document.
