accessibility and acceptability in technical manuals is written for an audience with a general interest in readability studies linguistics and technical writing with the main emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design and use of utility texts and how these texts are received and understood by a multifaceted audience accessibility is not a new research area and many explanations have been offered over the past years as to why non experts often have difficulties in comprehending texts written by technological experts this book offers a new approach to accessibility studies by exploring not only style but also attitudes to style by asking text consumers which style they prefer for different parts of the manual a key role is played by the systemic functional linguistics notion of grammatical metaphor a stylistic choice that is commonly used in technical literature grammatical metaphor although apparently obstructing the comprehension process of some readers is a

common element in the preferred style that separates the insiders from the outsiders an explanation of this rather surprising result is offered by resorting to critical discourse analysis

this book not only speaks of reducing energy proportion with respect to varying production levels but also asserts that this is wake up call to the textile mills to overlap your maintenance practices from time and safety based practices to the condition monitoring predictive maintenance based practices in your workings of production and utility machines many mills can still achieve the low hanging fruits in energy conservation in their premises and this book will facilitate the implementation of the same the book has many case studies on how mills that have already done the low cost energy conservation measures and how the same energy savings can be implemented in your textile mills now

the popularity of the internet and the affordability of it hardware and software have resulted in an explosion of applications architectures and platforms workloads have changed many applications including mission critical ones are deployed on a variety of platforms and the system z design has adapted to this change it takes into account a wide range of factors including compatibility and investment protection to match the requirements of an enterprise this ibm redbooks publication discusses the ibm zenterprise system an ibm scalable mainframe server ibm is taking a revolutionary approach by integrating separate platforms under the well proven system z hardware management capabilities while extending system z qualities of service to those platforms the zenterprise system consists of the ibm zenterprise 114 central processor complex the ibm zenterprise unified resource manager and the ibm zenterprise bladecenter extension the z114 is designed with improved scalability performance security resiliency availability and virtualization the z114 provides up to 18 improvement in uniprocessor speed and up to a 12 increase in total system capacity for z/os z/vm and linux on system z over the z10tm business class bc the zbx infrastructure

works with the z114 to enhance system z virtualization and management through an integrated hardware platform that spans mainframe power7tm and system x technologies the federated capacity from multiple architectures of the zenterprise system is managed as a single pool of resources integrating system and workload management across the environment through the unified resource manager this book provides an overview of the zenterprise system and its functions features and associated software support greater detail is offered in areas relevant to technical planning this book is intended for systems engineers consultants planners and anyone wanting to understand the zenterprise system functions and plan for their usage it is not intended as an introduction to mainframes readers are expected to be generally familiar with existing ibm system z technology and terminology
