**complex analysis chapter 2**

## **summary fall 2021 math ncku edu tw**

Mar 30 2023

complex analysis chapter 2 summary note if  $g(x)$  is continuous on  $[a, b]$  and differentiable on  $(a, b)$ , then there exists a point  $c \in (a, b)$  such that  $\frac{g(b) - g(a)}{b - a} = g'(c)$ . This gives the mean value theorem proof for  $x^2$ .

Let  $h(x) = f(b) - f(a) + g(x)(g(b) - g(a))$ . Since  $h(a) = h(b) = 0$ , there is a point  $c \in (a, b)$  such that  $h'(c) = 0$ . This follows from Rolle's theorem.

For each  $k \in \mathbb{N}$ , let  $f_k$  be a real-valued function defined on  $[a, b]$  such that  $f_k(x) = f(x)$  for all  $x \in [a, b]$  and  $|f_k'(x)| \leq k$  for all  $x \in (a, b)$ . Then, by the mean value theorem, there exists a point  $c_k \in (a, b)$  such that  $f_k'(c_k) = \frac{f_k(b) - f_k(a)}{b - a} = \frac{f(b) - f(a)}{b - a} + g(c_k)(g(b) - g(a))$ . Since  $|f_k'(x)| \leq k$ , we have  $|f_k'(c_k)| \leq k$ . Therefore,  $|g(c_k)(g(b) - g(a))| \leq k$ . As  $k \rightarrow \infty$ , we have  $|g(c_k)(g(b) - g(a))| \rightarrow 0$ . Hence,  $\lim_{k \rightarrow \infty} f_k'(c_k) = \lim_{k \rightarrow \infty} \frac{f_k(b) - f_k(a)}{b - a} = \lim_{k \rightarrow \infty} \frac{f(b) - f(a)}{b - a} = f'(c)$ .
