Biology Trending 2005-11-16 mathematics has always benefited from its involvement with developing sciences each successive interaction revitalises and enhances the field biomedical science is clearly the premier science of the foreseeable future for the continuing health of their subject mathematicians must become involved with biology with the example of how mathematics has benefited from and influenced physics it is clear that if mathematicians do not become involved in the biosciences they will simply not be a part of what are likely to be the most important and exciting scientific discoveries of all time mathematical biology is a fast growing well recognised albeit not clearly defined subject and is to my mind the most exciting modern application of mathematics the increasing use of mathematics in biology is inevitable as biology becomes more quantitative the complexity of the biological sciences makes interdisciplinary involvement essential for the mathematician biology opens up new and exciting branches while for the biologist mathematical modelling offers another research tool commensurate with a new powerful laboratory technique but only if used appropriately and its limitations recognised however the use of esoteric mathematics arrogantly applied to biological problems by mathematicians who know little about the real biology together with unsubstantiated claims as to how important such theories are does little to promote the interdisciplinary involvement which is so essential mathematical biology research to be useful and interesting must be relevant biologically
