Radiologic Science for Technologists 2008-04

this money saving package includes mosby mosby s radiography online radiologic physics 2e bushong radiologic science for technologists 9e and bushong workbook and lab manual for radiologic science for technologists 9e

Mosby's Radiography Online: Radiobiology and Radiation Protection + Radiologic Science for Technologists 2008-03-01

this money saving package includes mosby mosby s radiography online radiobiology and radiation protection 1e bushong radiologic science for technologists 9e and bushong workbook and lab manual for radiologic science for technologists 9e

Recommendations of the International Commission on Radiological Protection : Adopted September 9, 1958 1959

his book on radiation protection provides clear coverage of essential concepts plus the latest technology and new recommendations of the international commission on radiological protection a clear presentation of introductory concepts and essential physics explains the nature and scope of radiation protection and a discussion of the bioeffects of radiation provides rationale for today s protection concerns coverage includes principles and objectives of radiation protection a system of dose limitations dose limits radiation dosimetry protection surveys expressions of patient dose factors influencing radiation dose in imaging dose reduction techniques and quality assurance safety issues are emphasized as well as recommendations for the prudent use of magnetic resonance imaging

Radiation Protection 1959

this money saving package includes mosby mosby s radiography online radiologic physics 2e mosby mosby s radiography online radiographic imaging mosby mosby s radiography online radiobiology and radiation protection bushong radiologic science for technologists 9e and bushong workbook and lab manual for radiologic science for technologists 9e

Radiation Protection 1997

this book is the product of a unique collaboration by experts from leading international regional and national agencies and professional organizations discussing on the current hot issue on the judicious use and safety of radiation in radiology there have been several cases involving radiation overexposure that have received international attention strategies and solutions to guide readers how to maximize the benefits and minimize the risks when using radiation in medicine are covered

Radiography Online 2008-03-01

private landowners or federal agencies responsible for cleaning up radiological environments are faced with the challenge of clearly defining the nature and extent of radiological contamination implementing remedial alternatives then statistically verifying that cleanup objectives have been met sampling and surveying radiological environments pr

Radiological Health Data and Reports 1967

this book covers the security and safety of cbrne assets and management and illustrates which risks may emerge and how to counter them through an enhanced risk management approach it also tackles the cbrne cyber threats their risk mitigation measures and the relevance of raising awareness and education enforcing a cbrne cy security culture the authors present international instruments and legislation to deal with these threats for instance the unscr1540 the authors address a multitude of stakeholders and have a multidisciplinary nature dealing with cross cutting areas like the convergence of biological and chemical the development of edging technologies and in the cyber domain the impelling risks due to the use of malwares against critical subsystems of cbrn facilities examples are provided in this book academicians diplomats technicians and engineers working in the chemical biological radiological nuclear explosive and cyber fields will find this book valuable as a reference students studying in these related fields will also find this book useful as a reference

Radiological Health Data 1964

this book provides a current analysis of the legal and ethical challenges in preparing for and responding to chemical biological radiological nuclear and explosive cbrne crises from past events like the chernobyl nuclear incident in russia or the bhopal chemical calamity in india to the more recent tsunami and nuclear accident in japan or the ebola crisis in africa and with the on going threat of bioterrorism the need to be ready to respond to cbrne crises is uncontroversial what is controversial is whether we are on a path that adequately prepares us for the next event the ethical and legal scholars in this volume hold that much work remains to be done and offer this book to stimulate further reflection and dialogue around cbrne crises this is an indispensable book for both students and scholars of bioethics international law public health as well as for regulators and administrators developing policy and legislation related to public health planning and emergency responses

Fiscal Year 1982 Department of Energy, Authorization for National Security Programs 1982

the symposium on radionuclides in the food chain sponsored by the international life sciences institute in association with the international institute for applied systems analysis was intended to bring together policymakers and other representatives of the food industry with radiation experts involved in measuring and assessing radioactivity in foodstuffs the symposium was made timely by the problems arising from the nuclear reactor accident at chernobyl in the ussr which brought out the lack of international agreement on guidance for responding to such radionuclide contamination of food and foodstuffs the presentations by the radiation experts covered the sources of radionuclides natural radioactivity fallout from nuclear weapons tests routine releases from nuclear facilities and various nuclear accidents the speakers represented a broad distribution in both scientific disciplines and international geographic origin they summarized the available data on measurements and indicated the current procedures for assessing radiation exposure it was hoped that the food industry representatives would bring out the problems posed to industry and governments by the presence of radioactivity in food

Radiological Safety and Quality 2013-11-22

the probability for exposure to damaging radiation toxic chemicals in the environment and adverse biological agents has increased exponentially today the more frequent and faster travel that we experience today also escalates the risk of contraction and transmission of potentially deadly infections this has created a very real and escalating risk for injuries and deaths this is accentuated in the military and medical staff that is more frequently exposed to radiological chemical and biological agents in their normal working environment understanding the mechanisms whereby these toxic agents inflict damage to our bodies is essential to prepare us for these challenges much of the damage is inflicted through the generation of free radicals and non radical oxidants which then act through oxidative mechanisms to injury the body this volume will discuss the damage caused by these radiological chemical and biological environmental stressors the mechanisms through which the damage can occur and the novel strategies that can be used to reduce the injury inflicted by these toxic compounds using basic and clinical research approaches the contents of this book discuss new ideas for the development of bioactive products and environmental approaches to lessen or negate the biological damage inflicted by these noxious compounds

Energy and Water Development Appropriations for 1999: Department of Energy, Environmental management and commercial waste management 1998

offering in depth coverage of biologic chemical and radiologic agents this timely book helps family physicians understand their role in preparing for and responding to terrorist events the text considers the physical and psychological impact on providers and patients who are directly affected as well as spillover effects it also examines the structure function and planning efforts of the public health system at the local state and federal levels emphasis is placed on how physicians can work with health officials on the delivery of preventive and therapeutic measures

Energy and Water Development Appropriations for 1995: Environmental restoration and waste management 1994

note no further discount for this print product overstock sale significantly reduced list price an updated version of the 1989 tmm this volume addresses nuclear events and their consequences for the medical community topics covered include acute radiation syndrome triage and treatment of radiation and combined injury mass casualties treatment of internal radionuclide contamination behavioral and neurophysiological consequences of radiation exposure cytogenetic biodosimetry and more textbooks of military medicine tmm senior editor anthony b mickelson

Fundamentals Course for Radiological Monitors 1984

first multi year cumulation covers six years 1965 70

Sampling and Surveying Radiological Environments 2000-09-19

Since the dissolution of the Soviet Union, the nuclear threats facing the world are complex and constantly evolving. This volume is structured to promote wide-ranging, multi-national exploration of critical technology needs and underlying scientific challenges to reducing the threat of nuclear radiological terrorism. It illustrates through country-specific presentations how resulting technologies were used in national programs and to outline the role of legal policy and institutional frameworks in countering nuclear radiological terrorism.

Toxicological Profile for Plutonium 2010

Learn the professional and patient care skills you need for clinical practice. A clear, concise introduction to the imaging sciences. Introduction to radiologic sciences and patient care meets the standards set by the American Society of Radiologic Technologists (ASRT) Curriculum Guide and the American Registry of Radiologic Technologists (ARRT) Task List for certification examinations. Covering the big picture, expert authors Arlene M. Adler and Richard R. Carlton provide a complete overview of the radiologic sciences professions and of all aspects of patient care. More than 300 photos and line drawings clearly demonstrate patient care procedures. Step-by-step procedures make it easy to follow. Learn skills and prepare for clinicals. Chapter outlines and objectives help you master key concepts. Key terms with definitions are presented at the beginning of each chapter. Up-to-date references are provided at the end of each chapter. Appendices prepare you for the practice environment by including practice standards, professional organizations, state licensing agencies, the ARRT Code of Ethics, and patient's rights information. 100 new photos and 160 new full-color line drawings show patient care procedures. Updates ensure that you are current with the fundamentals and patient care sections of the ASRT Core Curriculum Guidelines. New and expanded coverage is added to the chapters on critical thinking, radiographic imaging, vital signs, professional ethics, and medical law. Student resources on a companion Evolve website help you master procedures with patient care lab activities and review questions, along with 40 patient care videos.

Radiological Health Training Resources 1979

This must-have text provides an insight into the science behind radiographic technology, suitable for radiography and radiology students at all levels. The text uses illustrations and simple analogies to explain the fundamentals while retaining more complex concepts for those with a more advanced knowledge of radiological physics. Updated by authors Martin Vosper, Andrew England, and Victoria Major to reflect advances and key topics in medical imaging practice, this text will support radiographers in their core role of obtaining high-quality images and optimal treatment outcomes. Strong links between theory and practice throughout, with updated clinical scenarios, clear and concise text featuring insight boxes and summary points. More than 60 new diagrams, logically organized to match the order of delivery used in current teaching programmes in the UK, updated to reflect advances in medical imaging practice and changes to teaching curricula. New information on X-ray exposure factors and their effect on the radiographic image, non-ionising radiation safety, MRI, ultrasound, mobile, portable, and dental systems, multimodality imaging, registration and fusion, and the science of body tissue depiction and PACS technology. Enhanced focus on diagnostic imaging. Evolve resources to support learning and teaching.
