principles of evolution considers evolution in the context of systems biology a contemporary approach for handling biological complexity evolution needs this systems perspective for three reasons first most activity in living organisms is driven by complex networks of proteins and this has direct implications particularly for understanding evo devo and for seeing how variation is initiated second it provides the natural language for discussing phylogenetic trees third evolutionary change involves events at levels ranging from the genome to the ecosystem and systems biology provides a context for integrating material of this complexity understanding evolution means on the one hand describing the history of life and on the other making sense of the principles that drove that history the solution adopted here is to make the science of evolution the primary focus of the book and place the various parts of the history of life in the context of the research that unpicks it this means that the history is widely distributed across the text this concise textbook assumes that the reader has a fair amount of biological knowledge and gives

equal weight to all the major themes of evolution the fossil record phylogenetics evodevo and speciation principles of evolution will therefore be an interesting and thought provoking read for honors level undergraduates and graduates working in the biological sciences

Consciousness in Humanoid Robots

this is the first coherent description of all levels of communication of ciliates ciliates are highly sensitive organisms that actively compete for environmental resources they assess their surroundings estimate how much energy they need for particular goals and then realise the optimum variant they take measures to control certain environmental resources they perceive themselves and can distinguish between self and non self they process and evaluate information and then modify their behaviour accordingly these highly diverse competences show us that this is possible owing to sign aling mediated communication processes within ciliates intra organismic between the same related and different ciliate species inter organismic and between ciliates and non ciliate organisms trans organismic this is crucial in coordinating growth and development shape and dynamics this book further serves as a learning tool for research aspects in biocommunication in ciliates it will guide scientists in further investigations on ciliate behavior how they mediate signaling processes between themselves and the environment
