during the last few years the concept of generic skills and competences has become widespread across universities an introduction to generic competences is as such important because it enables redefinition of educational goals and may positively rearrange forms of interaction in classes it also indicates that education should inspire students to develop and use critical and creative forms of thinking feeling and doing on the one hand the need to promote generic skills can be seen as driven by neoliberal desire on the other however generic competences can enable students to think feel and act differently but also respect and welcome various forms of life and ways of living responding to the growing need to reflect upon generic competences this book contributes to the various ways of conceptualising generic skills and the methods in which they might be acquired the volume engenders adventurous encounters between different theories which predominantly come from the feminist conceptual framework that result in appealing meanings of affect and concepts it also experimentally explores and discusses ways in which theories of affect and concepts may complicate understanding of generic competences and inspire generic skills oriented education consequently this collection revitalizes the concept of generic skills but also advocates daring pedagogical practices that invigorate the meaning of and approach to teaching and learning in present landscapes of higher education

this twelfth edition primarily updates the previous edition by adding more recent research and interpretations of the concepts and theoretical views associated with those concepts that were in the eleventh edition similar to the previous editions this new edition continues its two most distinctive features as an introductory motor learning and control textbook its overall approach to the study of motor learning and control and the organization of the implementation of that approach in every edition of this book the overall approach has been the presentation of motor learning and control concepts to identify the common theme of each chapter the concepts should be viewed as generalized statements and conclusions synthesized from collections of research findings following the concept statement is a description of a real world application of the concept which is then followed by discussions of specific topics and issues associated with the concept an important part of these discussions are summaries of research evidence on which we base our present knowledge of each topic and issue as well as the implications of this knowledge for practitioners the benefit of this organizational scheme is the presentation of motor learning and control as a set of principles and guidelines for practitioners which are based on research evidence rather than on tradition or how things have always been done
