## **ENCYCLOPAEDIA OF INTERNATIONAL AVIATION LAW 2017-05-15**

aerospace law is seeing a gradual merger between the two previously isolated regimes of human conduct pertaining separately to air and to space law the use of information technology is arguably the foremost compelling force responsible for the unity of the aviation and space activities of man it is therefore inevitable that information technology computer law and the laws pertaining to state and individual responsibility are inextricably intertwined in a net of legal issues which would emerge in this new millennium frontiers of aerospace law introduces such issues as challenges to be addressed both as corollaries and concomitants to this fundamental and overriding trend in the merger between air and space law the issues range in space from legal liabilities pertaining to extra terrestrial intelligence environmental pollution in outer space conduct of persons in outer space to cyber crimes affecting outer space activities and in air law issues such as aircraft noise economic trends of airports and air navigation services funding for aviation safety projects and emergent aero medical issues and privacy of airline pilots its recommendations are geared to look future reality directly in the face and find legal solutions in the realm of public international law remedial measures are almost non existent in the field of aerospace law except for a solid foundation given to the council of the international civil aviation organization to hear disputes between states on matters relating to civil aviation a facility which has so far scarcely been used in the organization's 55 year old history apart from a few provisions in the various space law conventions there is no single coherent settlement mechanism at space law the increasingly rapid proliferation of space activities in the coming years and their diversity leave no room for doubt that new laws will have to be put into place and new mechanisms to combat problems will have to be carefully thought

## **Frontiers of Aerospace Law 2023-11-24**

this book opens the most adventurous and passionate chapter in the history of humankind aviation in our modern world is one of the latest magnificent enterprises a kind of emblematic window through which we can cast a glance into the future since the aviation industry already applies technical organisational and administrative solutions which in other walks of life will be utilised only after years or decades the airplanes have become so swift and safe that flying has turned from a reckless adventure into public transport next to cities airports have been built from where every minute airplanes take off and depart to all the four corners of the world the once so enormous and mysterious terrestrial globe has shrunk to appear to be a tiny ball all points of which can be reached in a couple of hours this book introduces in its entirety the regulatory regime of aviation as the safest form of transport in our age which integrates exceptional spiritual and practical achievements technical innovation as well as creates significant values air transport is one of the most regulated industry the comprehension of its context requires the knowledge of the rules of international air law air law is a qualitatively separated part of international law with peculiar structure which has evolved by drawing on the centuries old traditions of maritime law and has developed to be one of the youngest and the most up to date branch of jurisprudence air law is an autonomous branch of law its uniqueness derives from the extraordinarily rigorous requirements occasionally written by blood of aviation safety and aviation security the author guides the reader into this barely familiar secluded world of aviation via 31 illustrations and the presentation of 100 legal cases the volume relies on the several decades professional experience of the author its objectives consist in the familiarisation of the public interested in aviation with this exceptionally intriguing area of international law in the support of the everyday work of experts in the area of aviation furthermore in the enhancement of the knowledge of theoretical and practical lawyers and broadening their horizons in this book the two most important founding treaties of international air law are introduced the chicao convention on international civil aviation 1944 and the montreal convention on the unification of certain rules for international carriage by air 1999 furthermore mention is made of all significant aviation law treaties the chicao and the montreal conventions are timeless sources of law since their meritorious amendment barely ensued therefore the relations and the legal solutions elucidated in the book are going to serve the reader for decades

## **The Law of the Air; Three Lectures Delivered in the University of London at the Request of the Faculty of Laws 2020-06-25**

all of the topics discussed in this book from sovereignty to cybercrime and from drones to the identification of passengers privacy are profoundly affected by algorithms so are air traffic services and aeronautical communications all of these aviation related aspects are addressed in a 75 year old treaty called the chicago convention and its annexes which as this book argues needs to be reviewed with a focus on its relevance and applicability in connection with moore s law which posits that transistors in computer microchips double in speed power and performance every two years while the cost of computers is halved during the same period firstly in terms of traditional territorial sovereignty we have arrived at a point where there is a concept of data sovereignty and ownership that raises issues of privacy data transmission becomes ambivalent in terms of territorial sovereignty and the westphalian model may not be the perfect answer whether it be the manufacture of airplanes the transfer of data on individuals or the transmission of aeronautical and telecommunications information all have to be carried out in accordance with the same fundamental principle duty of care against the backdrop of the relevant provisions of the chicago convention and its annexes the detailed analysis presented here covers key areas such as megatrends ai and international law in the digital age blockchain and aviation drones aviation and telecommunications aviation and the internet cybersecurity and digital identification of passengers privacy in turn the book suggests how we can best manage this transition
