a mole ratio is a conversion factor that relates the amounts in moles of any two substances in a chemical reaction the numbers in a conversion factor come from the coefficients of the balanced chemical equation the following six mole ratios can be written for the ammonia forming reaction above

a common type of stoichiometric relationship is the mole ratio which relates the amounts in moles of any two substances in a chemical reaction we can write a mole ratio for a pair of substances by looking at the coefficients in front of each species in the balanced chemical equation
