paper chromatography is an analytical method used to separate coloured chemicals or substances it is now primarily used as a teaching tool having been replaced in the laboratory by other chromatography methods such as thin layer chromatography tlc

chromatography is a journal published by the society of chromatographic science scs the journal publishes papers from all areas of the separation and detection including chromatography electrophoresis and so on following types of manuscripts are acceptable for publications

- 1 original paper
- 2 paper chromatography in analytical chemistry technique for separating dissolved chemical substances by taking advantage of their different rates of migration across sheets of paper it is an inexpensive but powerful analytical

although paper chromatography is simple to do it is quite difficult to explain compared with thin layer chromatography the explanation depends to some extent on what sort of solvent you are using and many sources gloss over

## chromatography wikipedia

Apr 19 2024

paper chromatography is a type of chromatography used to separate mixtures of substances into their individual components. It is a simple and inexpensive technique that is often used in teaching laboratories. The process involves a stationary phase (usually paper) and a mobile phase (usually a solvent). The mixture is applied to the stationary phase and the solvent moves through it, carrying the components with it. The components are separated based on their different affinities for the stationary and mobile phases.
