a primary objective in a first course in mechanics is to help develop a student's ability first to analyze problems in a simple and logical manner and then to apply basic principles to their solutions a strong conceptual understanding of these basic mechanics principles is essential for successfully solving mechanics problems this edition of vector mechanics for engineers will help instructors achieve these goals continuing in the spirit of its successful previous editions this edition provides conceptually accurate and thorough coverage together with a significant refreshment of the exercise sets and online delivery of homework problems to your students the 12th edition has added one case study per chapter and enhancements throughout the text and in connect the hallmark of the beer johnston series has been the problem sets this edition is no different over 650 of the homework problems in

the text are new or revised one of the characteristics of the approach used in this book is that mechanics of particles is clearly separated from the mechanics of rigid bodies this approach makes it possible to consider simple practical applications at an early stage and to postpone the introduction of the more difficult concepts additionally connect has over 100 free body diagram tool problems and process oriented problems mcgraw hill s connect is also available connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need when they need it how they need it so that class time is more effective connect allows the professor to assign homework quizzes and tests easily and automatically grades and records the scores of the student s work problems are randomized to prevent sharing of answers an may also have a multi step solution which helps move the students learning along if they experience difficulty

target audiencethis text is designed for the first course in statics offered in the sophomore year overviewthe main objective of a first course in mechanics should be to develop in the engineering student the ability to analyze any problem in a simple and logical manner and to apply to its solution a few well understood basic principles this text is designed to help the instructor achieve this goal vector analysis is introduced early in the text and is used in the presentation and discussion of the fundamental principles of mechanics vector methods are also used to solve many problems particularly three dimensional problems where these techniques

result in a simpler and more concise solution the emphasis in this text however remains on the correct understanding of the principles of mechanics and on their application to the solution of engineering problems and vector analysis is presented chiefly as a convenient tool in order to achieve the goal of being able to analyze mechanics problems the text employs the following pedagogical strategy practical applications are introduced early new concepts are introduced simply fundamental principles are placed in simple contexts students are given extensive practice through sample problems special sections entitled solving problems on your own extensive homework problem sets review problems at the end of each chapter and computer problems designed to be solved with computational software resources supporting this textbook instructor s and solutions manual features typeset one per page solutions to the end of chapter problems it also features a number of tables designed to assist instructors in creating a schedule of assignments for their course the various topics covered in the text have been listed in table i and a suggested number of periods to be spent on each topic has been indicated table ii prepares a brief description of all groups of problems sample lesson schedules are shown in tables iii iv and v together with various alternative lists of assigned homework problems for additional resources related to users of this si edition please visit mheducation.asia.olc.beerjohnston.mcgraw-hill.com connect engineering a web based assignment and assessment platform is available at mhhe.com/beerjohnston and includes algorithmic problems from the text lecture powerpoints an image bank and animations hands on mechanics is a website designed for instructors who are interested in incorporating three dimensional hands on teaching aids into their lectures developed through a partnership between the mcgraw hill engineering team and the department of civil and mechanical engineering at the united states military academy at west point this website not only provides detailed instructions for how to build 3 d teaching tools using materials found in any lab or local hardware store but also provides a community where educators can share ideas trade best practices and submit their own original demonstrations for posting on the site visit handsonmechanics.com mcgraw hill tegrity a service that makes class time available all the time by automatically capturing every lecture in a searchable format for students to
