

## Free epub Handbook of geriatric assessment 4th fourth edition .pdf

nursing this book offers an up to date review on the principles and practice of multidimensional assessment and management of the older individual which represents the cornerstone of modern clinical practice in the elderly the early chapters cover the main elements and scope of the comprehensive geriatric approach and explain the pathways of care from screening and case finding through to in depth assessment and treatment planning subsequent chapters review the evidence of how best to apply the multidimensional assessment and management approach in defined healthcare settings and within specific clinical areas such as cancer and surgery finally the education and training challenges are reviewed and the prospects for future clinical service and research in this important field are examined the book is very timely given the recent advances in application of this approach which reflect the growing international realization that older people are core business in many clinical areas where the role of specialist geriatric medicine has hitherto been limited accordingly the book will be relevant to a wide range of clinicians the authorship comprises many of the best known and widely published experts in their respective fields some decades ago comprehensive geriatric assessment was referred to as the new technology of geriatrics as research indicated many benefits of building models of care on assessment systems since those times assessment care technologies have proliferated and in many countries have become reference standards work however continues to extend and expand geriatric assessment programs as represented in the contents of this book geriatric assessment is an integral part of geriatric care throughout the world the frail elderly often have multiple chronic illnesses functional disabilities and psychosocial problems their needs therefore extending far beyond the treatment of a single medical condition comprehensive assessment of such patients requires a multidisciplinary team approach and the use of an organized efficient set of guidelines and procedures with which to identify and address potentially reversible problems the ultimate goal is then to systematically restore and maintain the functions essential to preserve quality of life practical geriatric assessment is structured for ease of quick reference the background to each application of geriatric assessment is given first and this is then placed in its practical context thus providing an essential guide to the principles and methods of effective geriatric assessment handbook of geriatric assessment fifth edition is a multidisciplinary text that takes a contemporary approach in line with patient and family centered care with contributions from the foremost experts in the field it contains the latest information on geriatric assessments for older adults completely updated and revised the fifth edition includes several new chapters including demographic trends age friendly health systems payment reform and impact the va health system self care and management impact on familial relations vulnerable populations building geriatric interdisciplinary teams advance care planning caregiver information spiritual assessment senior hunger and transitions of care cancer is clearly an age related disease recent research in both aging and cancer has demonstrated the complex interaction between the two phenomena this affects a wide spectrum of research and practice anywhere from basic research to health care organization core examples of these close associations are addressed in this book starting with basic research the first chapters cover cancer development mtor inhibition senescent cells altering the tumor microenvironment and immune senescence affecting cancer vaccine response taking into account the multidisciplinary of geriatric oncology several chapters focus on geriatric and oncologic aspects in patient assessment treatment options nursing and exercise programs the book is rounded off by a discussion on the impact of the metabolic syndrome illustrating the interactions between comorbidity and cancer and a chapter on frailty this book provides the reader with insights that will hopefully foster his or her reflection in their own research and practice to further the development of this most exciting field given the aging of the population worldwide and the high prevalence of cancer it is essential reading not only for oncologists and geriatricians but for all health practitioners this issue of clinics in geriatric medicine guest edited by dr john morley is devoted to rapid geriatric assessment articles in this issue will address frailty sarcopenia anorexia of aging mild cognitive impairment cognitive frailty falls hip fracture depression delirium and advanced directives and palliative care this vol meets a growing need in the areas of geriatric assessment combining data from studies in the area of cognitive aging changes in cog functioning caregivers reports and ethics for psychologists neuropsychologists researchers clinicians leading geriatricians and researchers present this highly practical guide to assessing older adults contains essential insights required for multidimensional assessments on seniors in a variety of settings home ambulatory care centers nursing homes office visits emphasizes how to perform the assessment and when to use specific assessment tools in particular circumstances presents detailed guidelines on how to administer and score the assessment tools handbook of geriatric oncology is a practical resource for oncologists and related clinicians who want to provide comprehensive patient centered care to the elderly cancer patient divided into nine succinct sections it includes topics spanning an overview of geriatric oncology and aging geriatric syndromes geriatric assessment select cancers commonly diagnosed in the elderly communication with the older cancer patient the nursing home patient with cancer models of care and survivorship palliative care and integrative medicine complex issues such as the physiologic changes of aging and their effect on cancer corresponding social and psychological aspects that accompany aging and a cancer diagnosis assessment of frailty managing comorbid conditions and diseases effective communication among healthcare providers the patient and caregivers as well as the risks and benefits of cancer screening are made simpler with helpful clinical guidance and clinical pearls spearheaded by world experts in geriatric oncology from memorial sloan kettering cancer center in new york this book is the definitive resource for oncologists and related clinicians to meet the demands of clinical management along the continuum of geriatric cancer care key features provides best practices for evaluating geriatric syndromes such as functional dependency falls cognitive impairment and dementia delirium depression and anxiety social isolation as well as syndromes related to nutrition comorbid conditions and polypharmacy includes practical guidance on when to treat and when not to treat cancer in older patients discusses unique factors associated with breast cancer prostate cancer colorectal cancer lung cancer ovarian cancer bladder cancer pancreatic cancer head and neck cancers and myelodysplastic syndromes in the elderly that impact care plans and treatment this completely revised text addresses assessment technology used by health care professionals social workers and researchers working with a wide variety of elderly populations including hospitalized elderly nursing home residents and those receiving home care services emphasis on the multidisciplinary functions of the assessment team and the inclusion of new information on the use of computers in geriatric assessment make this an invaluable resource comprehensive formalized interdisciplinary geriatric assessment is the key to providing effective service to older adults living in the community there has been amazing growth in the number of geriatric assessment tools the number and variety of professionals conducting assessments and the use of these assessments in long term care edited by a social worker occupational therapist nurse and physical therapist this bestselling book reflects the fact that accurate in home assessment is necessary in order to quantify an older adult s medical status psychosocial well being and functional capabilities ideal for use by students and field practitioners this book contains case examples assessment tools and practical suggestions that make it a favorite across disciplines this document contains the papers presented at the geriatric assessment workshop held in ottawa on september 25 26 1988 the papers discuss the background of geriatric assessment in canada specific modes of practice and current methods geriatric

assessment will provide clinicians with an ultra concise outline and memory refresher on the essential points of geriatric assessment the book s small trim size brief number of pages and lay flat binding lets the clinician keep it easily at hand for quick reference in the clinic or on the wards written by a geriatrician of the year by the american geriatrics society and editor of the oxford american handbook of geriatric medicine this handy booklet walks the reader through the essential points of medications and prescribing functional and cognitive assessment tools preoperative assessment delirium management and pharmacologic and non pharmacologic management of common problems such as falls urinary incontinence constipation and diarrhea check lists of activities for evaluating a patient in the home and useful equations are also included this is a unique text and reference on the multidimensional assessment of older persons it combines detailed accounts of measures for a wide range of functions with discussions of their applications in the care of older persons the effort throughout is to combine information on specific measures with insight into how and when each measure should be used this book summarizes evidence on frailty and ageing how this may impact patient outcomes and how frailty can be assessed managed and incorporated in the decision making process for older patients with cancer the book aims to empower clinical teams to assess and support older cancer patients with frailty ideally within a multidisciplinary setting and to improve the selection of older cancer patients to the most appropriate management treatment strategies in order to improve the outcomes of this group of patients often underrepresented in research the reader will learn the methods available for assessing frailty such as screening tools but also how to perform different geriatric assessments covering the different key components physical nutritional social psychological etc the book also provides information on how to manage and intervene on frailty with the role of pre habilitation and re habilitation how to set up specialised teams and pathways within one s hospital and community for these older cancer patients with frailty finally the management of this challenging group of patients according to the cancer type is discussed in detail alongside with mapping the unmet research needs and future directions in this field this practical manual in the care of older cancer patients won best oncology book in the bma medical book awards 2016 and is an essential tool created as a joint project of the association of cancer physicians acp and the british geriatric society bgs written by 134 contributors who are all experts in their fields it offers an overview of the latest developments with 32 real life case studies it is a valuable learning and reference resource for doctors nurses trainees and other professionals managing cancer in older patients this evidence based guidebook will assist the physician in managing the older cancer patient when implementing the appropriate treatment strategy taking account of comorbidities frailty and patient choice each clinical case includes a concise discussion on patient presentation and of scenarios underpinning issues experienced by older patients followed by a clear appraisal of how the latest clinical research impacts on patient management this large cohort of patients requires both innovative care and individual attention and this carefully crafted book shares the experience of an expert multidisciplinary team in the interest of patient centred care it is essential reading for specialists in oncology specialists in geriatric care general physicians doctors in training oncology nurses healthcare managers and administrators this volume evaluates a range of assessment measures with regard to older adults the expert contributors address topics such as assessment of health functional disability adls mental agility aging and personality depression and pain while the instruments themselves are readily available from other sources this book discusses the suitability strengths and weaknesses of various measures and offers current information on the rapidly changing state of the art assessment technology over the past two decades there has been a marked change in global age demographics with the number of over 60s increasing by 82 and the number of centenarians by 715 this new found longevity is testament to the success of recent advances in medicine but poses significant challenges to multiple areas of health care concerning older patients building upon its predecessor s reputation as the definitive resource on the subject this new edition of the oxford textbook of geriatric medicine offers a comprehensive and multinational examination of the field fully revised to reflect the current state of geriatric medicine it examines the medical and scientific basis of clinical issues as well as the ethical legal and socio economic concerns for healthcare policy and systems over 170 chapters are broken up into 16 key sections covering topics ranging from policy and key concepts through to infection cancer palliative medicine and healthy ageing new material includes focus on the evolving concepts of malnutrition sarcopenia frailty and related geriatric syndromes and integration of geriatric principles from public health primary and specialized care and transitional stages from home to emergency medicine and surgery rehabilitation and long term care the oxford textbook of geriatric medicine brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter as well as on related psychological philosophical and social issues cancer and aging are integrally related cancer incidence and mortality increase with age with most cancer diagnoses and deaths occurring in patients aged 65 and older the aging of the baby boomer population along with an overall increase in life expectancy points to a doubling of the u s population over age 65 by the year 2030 this demographic shift combined with the known association of cancer and aging is expected to bring about a rapid growth in the older cancer patient population it is clear that geriatric principles must become part of oncology care the evaluation and development of treatment recommendations for an older adult with cancer can be challenging for many reasons tumor biology and response to therapy are affected by age in addition age related factors may impact treatment patterns tolerance and efficacy these age related factors include functional status declines comorbid conditions changes in cognitive function weakening of organ function decreases in physiologic reserve and faltering social support geriatric medicine at a glance logically presents the core principles of geriatric medicine including mechanisms of ageing changes in physiology commonly seen in older adults and the clinical management and treatment of the key medical presentations affecting older patients it provides a thorough overview of the essential required core knowledge mapped to the british geriatrics society undergraduate curriculum on ageing geriatric medicine at a glance is fully aligned with the newly developed british geriatric society curriculum on ageing for undergraduate medical students explains the relevant concepts associated with ageing in addition to the common medical presentations seen in older adults includes the perspective of nurses and other allied health professionals features best of five mcq self assessment questions geriatric medicine at a glance will help address the uncertainty often experienced by medical students and junior doctors when dealing with older patients this edition of the interrai acute care for comprehensive geriatric assessment ac cga contains country specific examples for australia and uses the english native to australia the interrai ac cga is a key element of the interrai hospital assessment systems it is designed for use among older and some younger patients who have complex functional and psychosocial needs the interrai ac cga assessment and care planning system is a comprehensive standardized instrument for evaluating the needs strengths and preferences of older people who are judged to have major functional and psycho social issues that are likely to affect their management in hospital or discharge planning the interrai ac cga consists of an assessment form item by item instructions and a series of care planning protocols handbook of assessment in clinical gerontology new trends in healthcare practice and changes in healthcare organizations are causing an explosion in the field of clinical gerontology today a variety of fields such as health rehabilitation behavioral analysis and neuropsychology are now applying their assessment techniques to older adults and spurring significant growth in assessment knowledge and practice in areas previously neglected by gerontologists this groundbreaking handbook offers clinicians reliable and valid assessment tools and case examples in each chapter for assessing functional age psychosocial health comorbidity pathological behavior deficits and much more including issues in geriatric assessment mental status screening tests depression and anxiety disorders assessment of communication disorders and aphasia assessment of competency and decision

making capacity assessment of medication compliance dementia and delirium assessment behavioral health and chronic diseases ethical dilemmas that arise in assessment personality disorders and alcohol abuse assessment sexual function and dysfunction behavioral assessment principles of assessment in neuropsychology this comprehensive handbook the first of its kind gives clear guidelines on assessing cognitive functioning mental health and ability to engage in self care this second edition continues its mission of improving practical clinical knowledge among physicians and others caring for elderly people while providing updated information on several major areas in the field reflecting current practice trends a new chapter on home care has been added as well as one on comprehensive geriatric assessment revised guidelines for falls incontinence and drug treatment are also featured designed to provide both quick reference to clinical problem solving schemes and lists as well as a lucid readable discussion of basic topics in geriatrics the books value lies in its combination of brief readily understandable chapters a section of notes in outline form straightforward clinical approaches didactic exercises and new updated case studies family physicians primary care internists and other primary specialists caring for elderly people will thus find the book of great value it also belongs on the shelf of residents and individual health care professionals as well as in nursing homes hospitals where it will serve as a clinical reference guide this book is intended as a comprehensive resource for clinicians and researchers seeking in depth information on geriatric oncology the coverage encompasses epidemiology the biology and patho physiology of aging and cancer geriatric assessment and management hematologic malignancies solid tumors issues in patient care and research methods since cancer is a disease of aging and people are living longer most cancer patients are now aged 70 and older yet the more we age the more diverse we become in terms of our health biologic fitness and cancer behavior typically however general oncology clinical trials address only a selected healthier and younger population of patients geriatric oncology is the area of oncology that addresses these issues but while a wealth of knowledge has been accumulated information is often difficult to retrieve or insufficiently detailed the springerreference program in which this book is published offers an ideal format for overcoming these limitations since it combines thorough coverage with access to living editions constantly updated chapter by chapter via a dynamic peer review process ensuring that information remains current and pertinent
