this book deals with the quest for a divided welfare state in  
sweden the prime example is the rapid rise of private health  
insurance which now constitutes a parallel system  
characterized by state subsidies for some and not for others  
this functions as a kind of reverse means testing whereby  
primarily the upper classes get state support for new types  
of welfare consumption innovatively lapidus explains how  
such a parallel system requires not only direct and statutory  
state support but also indirect support for example from  
infrastructure built for the public health system he goes on to  
examine how semi private welfare funding is dependent on  
private provision and how the so called hidden welfare state  
gradually erodes the visible and former universal welfare  
state model in direct contrast to its own stated goals who  
benefits from privatized welfare how are the privatization of  
delivery and the privatization of funding linked how does this  
impact public willingness to pay tax all of these questions  
and more are discussed in this accessible volume
