explains how compilers translate high level language source code like code written in python into low level machine code that the computer can understand to help readers understand how to produce the best low level computer readable machine code in the beginning most software was written in assembly the cpu s low level language in order to achieve acceptable performance on relatively slow hardware early programmers were sparing in their use of high level language code knowing that a high level language compiler would generate crummy low level machine code for their software today however many programmers write in high level languages like python c c c java swift the result is often sloppy inefficient code but you don t need to give up the productivity and portability of high level languages in order to produce more efficient software in this second volume of the write great code series you ll learn how to analyze the output of a compiler to verify that your code does indeed generate good machine code the types of machine code statements that compilers typically generate for common control structures so you can choose the best statements when writing hll code just enough 80x86 and powerpc assembly language to read compiler output how compilers convert various constant and variable objects into machine data and how to use these objects to write faster and shorter programs new to this edition coverage of programming languages like swift and java code generation on modern 64 bit cpus arm processors on mobile phones and tablets stack based architectures like the java virtual machine modern language systems like the microsoft common language runtime with an understanding of how compilers work you ll be able to write source code that they can translate into elegant machine code that understanding starts right here with write great code volume 2 thinking low level writing high level

this is the second of raymond aron s classic two volume survey of the sociological tradition arguably the definitive work of its kind aron explores the work of three figures who profoundly shaped sociology as it entered the twentieth century Émile durkheim who continued auguste comte s quest for a science of society and a scientific validation of morality vilfredo pareto the italian neo machiavellian who emphasized the oligarchic or elitist character of all societies and the german sociologist max weber who reflected critically on the prospects for human freedom in an age marked by bureaucratization and rationalization aron presents rich portraits of these three thinkers drawing out the enduring insights that remain in their work at the same time he reflects critically on durkheim s project for a science of society pareto s critique of humanitarianism and weber s tragic pessimism above all the book is remarkable for demonstrating aron s lifelong indebtedness to and divergence from the thought of max weber the sociologist par excellence in aron s view this routledge classics edition includes an introduction by daniel j mahoney and brian c anderson
