this text is essential reading for students of strategic management and provides illuminating insights for the reflective practitioner this book explores how social software and developing community ontologies are challenging the way we operate in a performative space provided by publisher artificial intelligence ai has been much in the news recently with some commentators expressing concern that ai might eventually replace humans but many developments in ai are designed to enhance and supplement the performance of humans rather than replace them and a novel field of study with new approaches and solutions to the development of ai has arisen to focus on this aspect of the technology this book presents the proceedings of hhai2023 the 2nd international conference on hybrid human artificial intelligence held from 26 30 june 2023 in munich germany the hhai international conference series is focused on the study of artificially intelligent systems that cooperate

synergistically proactively responsibly and purposefully with humans amplifying rather than replacing human intelligence and invites contributions from various fields including ai human computer interaction the cognitive and social sciences computer science philosophy among others a total of 78 submissions were received for the main conference track and most papers were reviewed by at least three reviewers the overall final acceptance rate was 43 with 14 contributions accepted as full papers 14 as working papers and 6 as extended abstracts the papers presented here cover topics including interactive hybrid agents hybrid intelligence for decision support hybrid intelligence for health and values such as fairness and trust in hybrid intelligence we further accepted 17 posters and 4 demos as well as 8 students to the first hhai doctoral consortium this year the authors of 4 working papers and 2 doctoral consortium submissions opted for not publishing their submissions to allow a later full submission resulting in a total of 57 papers included in this proceedings addressing all aspects of ai systems that assist humans and emphasizing the need for adaptive collaborative responsible interactive and human centered artificial intelligence systems which can leverage human strengths and compensate for human weaknesses while considering social ethical and legal considerations the book will be of interest to all those working in the field new private law theory is pluralist comparative application oriented transnational and reflects critical approaches the purpose of this book is to provide individual investors who have as little as 1 000 to invest with the information necessary to earn a high return from investing in the stock market playing the game intelligently as outlined in this book will allow the small investor to earn a return better than most professional investors although the theories behind investment can be very complicated the individual investor does not need to understand these theories in order to outperform the so called experts this book will show the reader the steps necessary to become a savvy investor and beat the pros the good news is you can be a savvy investor and spend only a few minutes each year on your investment portfolio it sounds almost too good to be true but it is one of the most important things successful investors can do is concentrate on the variables they can control and not worry about the variables they cannot control when constructing a stock portfolio the two variables an individual investor can control are the costs associated with any investment and the risk related to an individual s portfolio adjusting these two elements in an intelligent way can have a dramatic impact on the return earned from one s investments potentially adding hundreds of thousands of extra dollars to the investor's investment account businesses continue to design and implement a variety of information systems that facilitate the creation aggregation and provision of product related information in order to increase the role that quality information is playing in consumers decision making processes consumer information systems and relationship management design implementation and use highlights empirical research theoretical frameworks and relevant models on the understanding and implementation of consumer information systems by covering consumer perceptions of practicality and ease of use this book is essential for practitioners in business environments and strategic management meeting consumer needs through the use of digital and based technologies as well as recent empirical research findings and design and implementation of innovative information systems this book is part of the advances in marketing customer relationship management and e services series collection a surprising vision of how human intelligence will coevolve with digital technology and revolutionize how we think and behave it is natural for us to fear artificial intelligence but does siri really want to kill us perhaps we are falling into the trap of projecting human traits onto the machines we might build in evolutionary intelligence neuman offers a surprisingly positive vision in which computational intelligence compensates for the well recognized limits of human judgment improves decision making and actually increases our agency in artful accessible and adventurous prose neuman takes the reader on an exciting fast paced ride all the while making a convincing case about a revolution in computationally augmented human intelligence neuman argues that just as the wheel made us mobile and machines made us stronger the migration of artificial intelligence from room sized computers to laptops to our watches smart glasses and even smart contact lenses will transform day to day human decision making if intelligence is the capacity to match means with ends then augmented intelligence can offer the ability to adapt to changing environments as we face the ultimate challenge of long term survival tapping into a global interest in technology s potential impacts on society economics and culture evolutionary intelligence demonstrates that our future depends on our ability to computationally compensate for the limitations of a human cognitive system that has only recently graduated best practices and managerial solutions for drawing funds and financial support from online communities a ground breaking new book beyond human error taxonomies and safety science deconstructs the conventional concept of human error and provides a whole new way of looking at accidents and how they might be prevented based on research carried out in the rail nuclear and defense industries the authors show how by concentrating solely on human error systems and sociological factors are frequently ignored in contemporary safety science they also argue that the information processing view of human cognition the foundation of the majority of safety science and ergonomics is hopelessly simplistic and leads to ineffective or even misguided intervention strategies wallace and ross explore how what they call the technically rational view of science can hamper the process of creating a taxonomy of error events and the implications this has for the current orthodoxy in laying out the limitations of the technically rational viewpoint they clearly define their own alternative approach they begin by demonstrating that the creation of reliable taxonomies is crucial and provide examples of how they created such taxonomies in the nuclear and rail industries they go on to offer a critique of conventional frequentist statistics and provide coherent easy to use alternatives they conclude by re analyzing infamous disasters such as thespace shuttle challenger accident to demonstrate how the standard view of these events ignores social and distributed factors the book concludes with a stimulating and provocative description of the implications of this new approach for safety science and the social sciences as a whole while providing a clear and intelligible introduction to the theory of human error and contemporary thinking in safety science wallace and ross mount a challenge to the old orthodoxy and provide a practical alternative paradigm this book constitutes the proceedings of the third international conference on internet science held in florence italy in september 2016 the 25 papers presented were carefully reviewed and selected for inclusion in this volume
