this volume contains revised papers that were presented at the international workshop entitled computational methods for algebraic spline surfaces compass which was held from september 29 to october 3 2003 at schloß weinberg kefermarkt a tria the workshop was mainly devoted to approximate algebraic geometry and its plications the organizers wanted to emphasize the novel idea of approximate implici zation that has strengthened the existing link between cad cagd computer aided geometric design and classical algebraic geometry the existing methods for exact implicitization i e for conversion from the parametric to an implicit representation of a curve or surface require exact arithmetic and are too slow and too expensive for industrial use thus the duality of an implicit representation and a parametric repres tation is only used for low degree algebraic surfaces such as planes spheres cylinders cones and toroidal surfaces on the other hand this duality is a very useful tool for veloping ef cient algorithms approximate implicitization makes this duality available for general curves and surfaces the traditional exact implicitization of parametric surfaces produce global rep sentations which are exact everywhere the surface patches used in cad however are always de ned within a small box only they are obtained for a bounded parameter domain typically a rectangle or in the case of trimmed surface patches a subset of a rectangle consequently a globally exact representation is not really needed in practice

handbook of thermoset plastics fourth edition provides complete coverage of the chemical processes manufacturing techniques and design properties of each polymer along with its applications this new edition has been expanded to include the latest developments in the field with new chapters on radiation curing biological adhesives vitrimers and 3d printing this detailed handbook considers the practical implications of using thermoset plastics and the relationships between processing properties and applications as well as analyzing the strengths and weakness of different methods and applications the aim of the book is to help the reader to make the right decision and take the correct action on the basis of informed analysis avoiding the pitfalls the authors experience has uncovered in industry the book supports engineers scientists manufacturers and r d professionals working with plastics the information included will also be of interest to researchers and advanced students in plastics engineering polymer chemistry adhesives and coatings offers a systematic approach guiding the reader through chemistry processing methods properties and applications of thermosetting polymers includes thorough updates that discuss current practice and the new developments on biopolymers nanotechnology 3d printing radiation curing and biological adhesives uses case studies to demonstrate how particular properties make different polymers suitable for different applications covers end use and safety considerations

this volume explores explains and supports the case for an advanced exotic beam facility from a theoretical perspective the us nuclear physics community and the us department of energy are committed to building such a facility the topics covered constitute a survey of present activities in nuclear theory that will set the challenges for an advanced exotic beam facility and provide the starting point for interpreting experiments that will be conducted there the research programs described are all at the forefront of nuclear theory and they include research on the detailed structures of the lightest nuclei systematic descriptions of all observed nuclei nuclear tests of fundamental symmetries of nature the explosion mechanisms of supernovae and astrophysical synthesis of the heavy elements as well as several other topics

presenting the collaborations of over thirty international experts in the latest developments in pure and applied mathematics this volume serves as an anthology of research with a common basis in algebra functional analysis and their applications special attention is devoted to non commutative algebras non associative algebras operator theory and ring and module theory these themes are relevant in research and development in coding theory cryptography and quantum mechanics the topics in this volume were presented at the workshop on non associative non commutative algebra and operator theory held may 23 25 2014 at cheikh anta diop university in dakar senegal in honor of professor amin kaidi the workshop was hosted by the university's laboratory of algebra cryptology algebraic geometry and applications in cooperation with the university of almería and the university of Málaga Dr Kaidi's work focuses on non associative rings and algebras operator theory and functional analysis and he has served as a mentor to a generation of mathematicians in Senegal and around the world

designed for those beginning to study linguistics this is a lively introduction to two key aspects of the structure of language syntax the structure of sentences and morphology the structure of words it shows students in a step by step fashion how to analyze the syntax and morphology of any language by clearly describing the basic methods and techniques and providing almost 100 practical exercises based on data from a rich variety of the world s languages written in an engaging style and complete with a comprehensive glossary exploring language structure explains linguistic concepts by using clear analogies from everyday life it introduces a range of essential topics in syntax and morphology such as rules categories word classes grammatical relations multi clause constructions and typology providing a solid foundation in morphology and syntax this is the perfect introductory text for beginning students and will fully prepare them for more advanced courses in linguistic analysis

1974

the gamm committee for numerical methods in fluid mechanics organizes workshops which should bring together experts of a narrow field of computational fluid dynamics cfd to exchange ideas and experiences in order to speed up the development in this field in this sense it was suggested that a workshop should treat the solution of cfd problems on vector computers thus we organized a workshop with the title the efficient use of vector computers with emphasis on computational fluid dynamics the workshop took place at the computing centre of the university of karlsruhe march 13 15 1985 the participation had been restricted to 22 people of 7 countries 18 papers have been presented in the announcement of the workshop we wrote fluid mechanics has actively stimulated the development of superfast vector computers like the cray s or cyber 205 now these computers on their turn stimulate the development of new algorithms which result in a high degree of vectorization scalar vectorized execution time but with 3 d problems we quickly reach the limit of present vector computers if we want e g to solve a system of 6 partial differential equations e g for u, v, w, p or for the vectors $u, \text{curl } u$ on a $50 \times 50 \times 50$ grid we have 750 000 unknowns and for a 4th order difference method we have circa 60 million nonzero coefficients in the highly sparse matrix this characterizes the type of problems which we want to discuss in the workshop

modeling and control of biotechnical processes covers the proceedings of the first international federation of automatic control workshop by the same title held in helsinki finland on august 17 19 1982 this book is organized into seven sections encompassing 37 chapters the opening section deals with the measurement techniques in fermentation processes and the use of automated analyzers to control microbial processes the next sections consider the concepts of bioreactor modeling and related problems as well as the modeling and control of biological wastewater treatment processes other sections discuss the economic and static optimization the computer control of production processes and the application of estimation and identification methods to biotechnological processes the final sections explore the principles of real time analysis use of computer control in specific biotechnical production process control design and the modeling of adaptive control this book is of great value to biotechnologists biochemists and control engineers

in the area of digital image processing the new area of time varying image processing and moving object recognition is contributing to impressive advances in several fields presented in this volume are new digital image processing and recognition methods implementation techniques and advanced applications such as television remote sensing biomedicine traffic inspection and robotics new approaches such as digital transforms neural networks for solving 2 d and 3 d problems are described many papers concentrate on motion estimation and recognition i e tracking of moving objects overall the book describes the state of the art theory implementation applications of this developing area together with future trends the work will be of interest not only to researchers professors and students in university departments of engineering communications computers and automatic control but also to engineers and managers of industries concerned with computer vision manufacturing automation robotics and quality control

Selected Water Resources Abstracts

1990

this book constitutes revised selected papers from the 20th international workshop on cellular automata and discrete complex systems automata 2014 held in himeji japan in july 2014 the 10 regular papers included in this volume were carefully reviewed and selected from a total of 25 submissions it also contains one invited talk in full paper length

Opportunities With Exotic Beams - Proceedings Of The Third Anl/msu/jina/int Ria Workshop

2007-03-06

this book constitutes the thoroughly refereed post proceedings of the 8th international workshop on computer aided systems theory eurocast 2001 held in las palmas de gran canaria spain in february 2001 the 48 revised full papers presented together with two invited papers were carefully selected during two rounds of reviewing and revision the book offers topical sections on computer aided systems theory mathematical and logical formalisms information and decision complexity neural like computation automation and control computer algebra and automated theorem proving and functional programming and lambda calculus
