nanomaterials characterization techniques volume two part of an ongoing series offers a detailed analysis of the different types of spectroscopic methods currently being used in nanocharacterization these include for example the raman

spectroscopic method for the characterization of carbon nanotubes cnts this book outlines the different kinds of spectroscopic tools being used for the characterization of nanomaterials and discusses under what conditions each should be used the book is intended to cover all the major spectroscopic techniques for nanocharacterization making it an important resource for both the academic community at the research level and the industrial community involved in nanomanufacturing explores how spectroscopy and x ray based nanocharacterization techniques are applied in modern industry analyzes all the major spectroscopy and x ray based nanocharacterization techniques allowing the reader to choose the best for their situation presents a method orientated approach that explains how to successfully use each technique

a unique feature of this book is its focus on nanotechnological solutions for the production of bioenergy and biofuels coverage includes topics such as nanobiotechnology microalgae biofuel cells biomass pretreatment and biomass conversion an international team of experts also addresses the need to precisely characterize nanoparticles and the role of catalysts the range of topics addressed together with a chapter on risk management make this

book a highly useful resource for a broad readership including physicists chemists microbiologists biotechnologists food technologists agricultural engineers and nanotechnologists

availability of advanced computational technology has fundamentally altered the investigative paradigm in the field of biomechanics armed with sophisticated computational tools researchers are seeking answers to fundamental questions by exploring complex biomechanical phenomena at the molecular cellular tissue and organ levels the computational armamentarium includes such diverse tools as the ab initio quantum mechanical and molecular dynamics methods at the atomistic scales and the finite element boundary element meshfree as well as immersed boundary and lattice boltzmann methods at the continuum scales multiscale methods that link various scales are also being developed while most applications require forward analysis e g

finding deformations and stresses as a result of loading others involve determination of constitutive parameters based on tissue imaging and inverse analysis this book provides a glimpse of the diverse and important roles that modern computational technology is playing in various areas of biomechanics including biofluids and mass transfer cardiovascular mechanics musculoskeletal mechanics soft tissue mechanics and biomolecular mechanics

a history of the elaborate and brilliantly sustained world war ii intelligence operation by which hitler s generals were tricked into giving away vital nazi secrets at the outbreak of world war ii mi6 spymaster thomas kendrick arrived at the tower of london to set up a top secret operation german prisoners cells were to be

bugged and listeners installed behind the walls to record and transcribe their private conversations this mission proved so effective that it would go on to be set up at three further sites and provide the allies with crucial insight into new technology being developed by the nazis in this astonishing history helen fry uncovers the inner workings of the bugging operation on arrival at stately homes turned prisons like trent park high ranking german generals and commanders were given a phony interrogation then treated as guests wined and dined at exclusive clubs and encouraged to talk and so it was that the allies got access to some of hitler s most closely guarded secrets and from those most entrusted to protect them
