this book is a quick aid for any clinician dealing with patients with rheumatic diseases the major gap that we tried to fill by writing this book is the clinical relevance to practice it is hardly ever seen that a resident in rheumatology is carrying any book about rheumatology in his/her rotation obviously because there are no good books with relevance to the daily practice a resident is facing now here are the specific objectives of the book the chapters might be fulfilling more than one of these general objectives to construct a clinical approach to patients with arthritis to interpret laboratory findings in patients with rheumatic diseases to prescribe

and monitor drugs used to treat patients with rheumatic diseases to construct a diagnostic approach to common medical problems in patients with rheumatic diseases to provide an update in the classification and management of common rheumatic diseases based on international societies the features and content in the book that will be most valuable the first part which represent the basics in rheumatology practice there will be a comprehensive chapter about how to approach history taking from patients presenting with a rheumatological problem there will be also a simplified approach to msk examination of common joints from a rheumatological perspective with the intention to diagnose arthritis and not to be mixed with sports injuries or other soft tissue problems in the last section of the book we will bring the latest classification criteria and the latest recommendation for management guidelines they are so many in one section we are not considering our book as a reference in how to manage patients with ra or sle by prescribing appropriate drugs we are going only to focus on the approach to the patients and providing the latest guidelines for management available for the reader of the book
