this new volume explores two alternative economic theories the classical theory and the marginalist or neoclassical theory through a discussion between two eminent economists pierangelo garegnani and paul samuelson the key themes of the volume are the difference in approaches to the explanation of the distribution of income and relative prices and therefore different approaches to all other economic problems in particular capital accumulation and economic growth the book discusses whether there is a classical approach to the theory of value and distribution at the core of economic theory that is fundamentally different from the later marginalist or neoclassical theory in the volume the late pierangelo garegnani argues for the validity of piero sraffa s position on this issue whilst the late noble laureate

paul samuelson vehemently contests it at a time of economic crisis the future of the discipline is far from certain and so it is extremely important to bring these debates back into the light by reproducing them together for the first time a comprehensive introduction by heinz kurz sets the debate in this context and provides crucial background to the arguments

issues relating to values have always had a place in the school science curriculum sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with its emphases of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum one obvious very broad difference of this form is the central place in science education thinking in many European countries of *bildung* and the complete absence of this construct from most science curriculum thinking in English speaking contexts there are numbers of such country cultural differences in the 1990s many countries moved towards various conceptualizations of outcomes based education some sometimes so labelled and sometimes not it was usual but not

universal for the focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic currently there are a number of education systems that are changing again and choosing to move away from outcomes based education for example south africa and several australian states one of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education

many scholars discuss marx s capital from many perspectives but accounting for value uniquely advances and defends an

accounting interpretation of his theory of value that he used it to explain capitalists accounts it confirms and builds on the temporal single system interpretation s refutation of the charge that marx s illustration of the transformation from values to prices is inconsistent and its defense of his law of the tendential fall in the rate of profit it rejects other interpretations by showing that only a temporal single system interpretation is consistent with marx s accounting the book shows that marx became seriously interested in accounts from the late 1850s during an important period in the development of his critique of political economy asking engels for information and explanations examining their letters in the context of marx s evolving work it argues supports the hypothesis that discovering he could explain them with his theory of value gave him the breakthrough he needed to decide how to present his work and explains why in 1862 he decided to change its title to capital marx s explanations of capitalist accounting it concludes amount to an accounting theory that explains how individual capitalists and the capital market use what is for many the invisible hand of accounting to control the production and distribution of surplus value marx claimed his theory of value was a work of science a critique of political economy that would deliver a theoretical blow from which the bourgeoisie would never recover he failed critics argue because his critique depends on hypothetical entities which we cannot directly observe such as value and abstract labour surplus value which

means his theory is not open to empirical refutation the book however argues that he used his theory of value to explain the phenomenal forms of profit rate of profit etc by explaining the observable accounting principles and practices capitalists use to calculate and control them in which as he said we can glimpse the determination of value by socially necessary labor time which experience could have refuted
