larvatus prodeo announced rene descartes at the beginning of the seventeenth century i come forward masked deliberately disguising or silencing their most intimate thoughts and emotions many early modern europeans besides descartes princes courtiers aristocrats and commoners alike chose to practice the shadowy art of dissimulation for men and women who could not risk revealing their inner lives to those around them this art of incommunicativity was crucial both personally and politically many writers and intellectuals sought to explain expose justify or condemn the emergence of this new culture of secrecy and from naples to the netherlands controversy swirled for two centuries around the powers and limits of dissimulation whether in affairs of state or affairs of the heart this beautifully written work crisscrosses europe with a special focus on italy to explore attitudes toward the art of dissimulation in the sixteenth and seventeenth centuries discussing many canonical and lesser known works jon r snyder examines the treatment of dissimulation in early modern treatises and writings on the court civility moral philosophy political theory and in the visual arts everything bookseller separately paged and not included in the consecutive numbering of the regular series what are the real disease entities in psychiatry this is a question that has bedeviled the study of the mind for more than a century yet it is low on the research agenda of psychiatry basic science issues such as neuroimaging neurochemistry and genetics carry the day instead there is nothing wrong with basic science research but before studying the role of brain circuits or cerebral chemistry shouldn t we be able to specify how the various diseases present clinically catatonia is a human behavioral syndrome that for almost a century was buried in the poorly designated psychiatric concept of schizophrenia its symptoms are well know and some of them are serious catatonic patients may die as their temperatures accelerate they become dehydrated because they refuse to drink they risk inanition because they refuse to eat or move autistic children with catatonia may hit themselves repeatedly in the head we don t really know what catatonia is in the sense that we know what pneumonia is but we can identify it and it is eminently treatable clinicians can make these patients better on a reliable basis there are few other disease entities in psychiatry of which this is true so why has there been so little psychiatric interest in catatonia why is it simply not on the radar of most clinicians catatonia actually occurs in a number of other medical illnesses as well but it is certainly not on the radar of most internists or emergency physicians in the madness of fear drs shorter and fink seek to understand why this vast field of ignorance exists in the history of catatonia they see a remarkable story about how medicine flounders and then seems to find its way and it may help doctors realized that it did not seem logical to put a new carriage underneath an obsolete howitzer consequently development began anew with a carriage designed to be used for the 155 mm howitzer this was completed by may 15th 1941 when the howitzer m1 on the carriage m1 was standardized the howitzer itself differed from the older model by a lengthened barrel of twenty calibers and a new breech mechanism uniquely it was the sole slow cone interrupted screw mechanism to enter service after 1920 this meant that two separate movements were necessary to open the breech versus the single movement of the steep cone mechanism that simultaneously rotated and withdrew the breech created in 1943 this technical manual reveals a great deal about the 155 mm howitzer m1 s design and capabilities
