Review of the Draft Interagency Report on the Impacts of Climate Change on Human Health in the United States

2015-08-24

the u s national climate assessment identified a number of ways in which climate change is affecting and is likely to affect people infrastructure natural resources and ecosystems those impacts in turn are increasingly having important current and potential future consequences for human health there is a need to probe more deeply into how climate change impacts on the environment can create environmental stressors that in turn are having and or have the potential to have significant impact on human health in a number of dimensions in response to this need the u s global change research program usgcrp has initiated an interagency scientific assessment on the impacts of climate change on human health in the united states the assessment is intended to inform public health authorities other planning and policy entities and the general public review of the draft interagency report on the impacts of climate change on human health in the united states evaluates the scientific basis findings and key messages of the usgcrp draft assessment this report offers a number of overarching suggestions on how the usgcrp report authors can enhance their

identification and assessment of the science and better communicate their conclusions to all of their target audiences these recommendations this help the assessment to play a significant role in continued efforts to examine and explore the impacts of climate change on human health

Draft Risk Assessment of the Potential Human Health Effects Associated with Exposure to Perfluorooctanoic Acid and Its Salts

2005

the draft bill was published in may 2007 as command paper cm 7087 isbn 9780101708722 vol 1 of this report is also available isbn 9780104011348

Oakland Harbor Deep-draft Navigation Improvements, Alameda County

1994

an increasing number of large scale natural disasters have affected millions of people in recent years major earthquakes floods and hurricanes have caused great destruction of property and loss of life while forest fires pipeline failures and bombings have created equally devastating affects on a smaller scale the increased threats are the topic of the third international conference on disaster management and human health risk convened so that experts on public health security and disaster management could share information this book contains the papers presented at the conference topics covered include disaster analysis disaster monitoring and mitigation emergency preparedness risk mitigation risk and security safety and resilience socio economic issues biological threats learning from disasters

Human Tissue and Embryos (Draft) Bill

2007-08-08

formaldehyde is ubiquitous in indoor and outdoor air and everyone is exposed to formaldehyde at some concentration daily formaldehyde is used to produce a wide array of products particularly building materials it is emitted from many sources including power plants cars gas and wood stoves and cigarettes it is a natural product in some foods and it is naturally present in the human body as a metabolic intermediate much research has been

conducted on the health effects of exposure to formaldehyde including effects on the upper airway where formaldehyde is deposited when inhaled and effects on tissues distant from the site of initial contact the u s environmental protection agency epa released noncancer and cancer assessments of formaldehyde for its integrated risk information system iris in 1990 and 1991 respectively the agency began reassessing formaldehyde in 1998 and released a draft iris assessment in june 2010 given the complexity of the issues and the knowledge that the assessment will be used as the basis of regulatory decisions epa asked the national research council nrc to conduct an independent scientific review of the draft iris assessment in this report the committee to review epa s draft iris assessment of formaldehyde first addresses some general issues associated with the draft iris assessment the committee next focuses on questions concerning specific aspects of the draft assessment including derivation of the reference concentrations and the cancer unit risk estimates for formaldehyde the committee closes with recommendations for improving the iris assessment of formaldehyde and provides some general comments on the iris development process

Disaster Management and Human Health Risk III

2013-06-01

tetrachloroethylene is a volatile chlorinated organic hydrocarbon that is widely used as a solvent in the dry cleaning and textile processing industries and as an agent for degreasing metal parts it is an environmental contaminant that has been detected in the air groundwater surface waters and soil in June 2008 the U.S. Environmental Protection Agency released its draft toxicological review of tetrachloroethylene perchloroethylene CAS No. 127-18-4 in support of summary information on the Integrated Risk Information System (IRIS). The draft IRIS assessment provides quantitative estimates of cancer and noncancer effects of exposure to tetrachloroethylene which will be used to establish air quality and water quality standards to protect public health and to set cleanup standards for hazardous waste sites at the request of EPA. The National Research Council conducted an independent scientific review of the draft IRIS assessment of tetrachloroethylene from toxicologic epidemiologic and human clinical perspectives. The resulting book evaluates the adequacy of the EPA assessment the data and methods used for deriving the noncancer values for inhalation and oral exposures and the oral and inhalation cancer unit risks posed by tetrachloroethylene evaluates whether the key studies underlying the draft IRIS assessment are of requisite quality reliability and relevance to support the derivation of the reference values and cancer risks evaluates whether the uncertainties in EPA's risk assessment were adequately described and where possible quantified and identifies research that could reduce the uncertainty in the current understanding of human health effects associated with tetrachloroethylene exposure.

the book will take a systematic look at nanoparticle risks within the paradigm of risk assessment consider the limitations of this paradigm in dealing with the extreme uncertainties regarding many aspects of nanoparticle exposure and toxicity and suggest new methods for assessing and managing risks in this context it will consider the occupational environment where the potential for human exposure is the greatest as well as the issues relevant to occupational exposure assessment e g the exposure metric and the evidence from toxicological and epidemiological studies a chapter will be devoted to how conventional risk assessment can be carried out for a candidate nanoparticle e g carbon nanotubes and the limitations that arise from this approach we will propose several alternate methods in another chapter including screening assessments and adapting the rich methodological literature on the use of experts for risk assessment another chapter will deal with non occupational populations their susceptibilities and life cycle risk assessments there will be a chapter on current risk management and regulatory oversight frameworks and their adequacy this chapter will also include a discussion of u s and e u approaches to risk assessment as well as corporate approaches

The Superfund Reform Act

1998

recognizing that the human and animal health are interconnected brings along the challenge of integrating their respective health systems including routine disease surveillance activities outbreak management and emergency preparedness however approaches in these different sectors are still unaligned in many ways including their respective agendas both at the country and the supranational levels several initiatives have been launched to study and tackle this problem since the early 2000s the world health organization who the food and agricultural organization of the united nations fao and the world organization of animal health oie paved the road of multi sectorial one health approaches and collaborations leading to the recent publication of the tripartite zoonoses guide in europe the one health european joint programme aims at fostering the transdisciplinary cooperation of activities that are relevant to one health within and across european countries furthermore various scientific networks and consortia have been set up to bring together professionals and experiences from different sectors integration is key to the one health agenda and to the challenge of future preparedness and response to foodborne pathogens and other emerging threats both from an epidemiological and microbiological perspective this research topic aims at describing first hand successful

inspirational and possibly visionary experiences about the integration of approaches procedures and methodologies for one health surveillance across the human health animal health environmental health and food safety sectors at the local national or supranational levels

understand the fundamentals of human risk assessment with this introduction and reference human risk assessments are a precondition for virtually all industrial action or environmental regulation all the more essential in a world where chemical and environmental hazards are becoming more abundant these documents catalog potential environmental toxicological ecological or other harms resulting from a particular hazard from chemical spills to construction projects to dangerous workplaces they turn on a number of variables of which the most significant is the degree of human exposure to the hazardous agent or process human and ecological risk assessment combines the virtues of a textbook and reference work to introduce and analyze these vital documents beginning with the foundational theory of human health risk assessment it then supplies case studies and detailed analysis illustrating the practice of producing risk assessment documents fully updated and authored by leading authorities in the field the result is an indispensable work readers of the second edition of human and ecological risk assessment will also find over 40 entirely new case studies reflecting the latest in risk assessment practice detailed discussion of hazards including air emissions contaminated food and soil hazardous waste sites and many more case studies from multiple countries to reflect diverse international

standards human and ecological risk assessment is ideal for professionals and advanced graduate students in toxicology industrial hygiene occupational medicine environmental science and all related subjects

Review of the Environmental Protection Agency's Draft IRIS Assessment of Formaldehyde

2011-05-31

most brownfields cleanups have relied on institutional and engineering controls as part of the remedy although the implementation monitoring and enforcement of these controls is one of the most difficult issues affecting contaminated property cleanup and redevelopment the critical role of institutional controls has recently been highlighted by the 2001 brownfields amendments and as a result a key element in the future success of brownfields redevelopment will rest on understanding and effectively using risk based corrective action including institutional and engineering controls implementing institutional controls at brownfields and other contaminated sites the first book on this important and evolving topic provides a thorough grounding in the history and current use of institutional controls emphasizing federal state and public perspectives this compendium of articles written by over 43 experts in the field offers real estate and environmental practitioners a state of the

art review of a subject that is integral to the success and growth of brownfields redevelopment projects also examines some of the emerging tools that can be used in brownfields redevelopment including custodial trusts one call systems and web based tracking systems it also discusses the benefits of the proposed uniform model law on environmental covenants ueca part ii addresses the federal perspective including the statutory and regulatory framework for the use of institutional controls in cercla and rcra the state perspective is covered in part iii looking at the varying use of these controls in several states including arizona california illinois massachusetts new jersey and maine experience in the field is the focus of part iv which reviews how these controls have been used highlights recent case studies and draws conclusions on what can be learned from these successes and failures documents and forms including the flow chart from the astm standard guide on the use of activity and use limitations including institutional and engineering controls e 2091 final fact sheets from the environmental protection agency for site managers at superfund and rcra sites guidance from the department of defense and state documents referenced in the text
