the crucial role of mathematical and computational techniques in
contemporary science the series publishes expositions on all aspects
of applicable and numerical mathematics with an emphasis on new
developments in this fast moving area of research the author gives a
self contained presentation of the mathematical concepts from a
computer scientist s point of view combining point set topology
algebraic topology group theory differential manifolds and morse
theory fields as applied mathematics computer science geology biology
engineering and even business studies this book is designed to give a
thorough self contained introduction to the field of multivariate
scattered data approximation without neglecting the most recent
results written by a computer scientist for computer scientists this
book teaches topology from a computational point of view and shows how
to solve real problems that have topological aspects involving
computers this series contains monographs with a long life time
covering topics described by the term computational science and
engineering this includes theoretical aspects of scientific computing
such as mathematical modeling optimization methods discretization
techniques show all a discipline of multiprogramming programming
