deolito vistar brings a new perspective to the interpretation of the temple incident a key event in jesus life by approaching the subject not from the historical jesus point of view but from that of the authors of the gospels using composition criticism as a method vistar sensitively analyzes the four gospels accounts of the incident and shows areas of commonalities and crucial areas where the four evangelists have their own distinctive understanding of what jesus meant by his protest in the temple this book is a helpful example of the use of composition analysis in the exegesis of gospel texts it is also a helpful study of what is now generally taken for granted in gospel scholarship that the four evangelists were both historians and theologians the clinical significance of the essential biological metals covers the six trace minerals necessary for human survival namely zinc copper manganese molybdenum chromium and cobalt this book contains seven chapters that specifically discuss the effects of these minerals for enzyme function protein synthesis and their nutritional significance in veterinary and agricultural practice some of the topics covered in the book are the importance of interactions between the essential biological metals importance of fertilizers analysis of water supply soil mineral content and cancer mortality influence of drinking water on atherosclerosis non essential but biologically important metals and absorption and availability of zinc other chapters deal with the factors influencing absorption of zinc the effects of copper on zinc availability and the form and absorption of copper in the diet a chapter is devoted to the role of lymphatics in copper absorption another chapter focuses on the distribution absorption and transport of manganese in the blood the book can provide useful information to doctors biochemists nutritionists students and researchers reprint of the original first published in 1875 abstract a review of current research focuses on possible effects of increased iron enrichment of wheat flour health hazards associated with hereditary iron storage disorders that might accrue from increased iron consumption are assessed factors relating to iron metabolism include the importance of the intestinal mucosa in regulating iron absorption the phenomena of iron storage the significance of heme and nonheme iron and the iron compounds of the body the diseases and disorders characterized by excess body iron are hemosiderosis hemochromatosis and certain anemias while considerable research has been done on iron nutriture the details of absorption transport utilization storage and excretion are not well understood dietary calculations revealed tha increased flour enrichment would raise the average daily intakes of males and females it is concluded that this increase will have little impact on the iron accumulation of normal males and will not precipitate hereditary iron storage disorders cj as the title indicates the theme of this book is the functions of biochromes in animals recent works on zoochromes such as those of d l fox 1953 h m fox and vevers 1960 and vuillaume 1969 have been concerned primarily with the chemical nature and the taxonomic distribution of these materials and although function has been considered where relevant this has not been the centre of interest and certainly not the basis for the arrangement of the subject matter functional significance is a profitable focus of interest since it is the one theme which can make biochromatology a discrete and integral subject and because it is the main interest in all biological fields at present chromatology seems to be a particularly schizoid

abstract a review of current research focuses on possible effects of increased iron enrichment of wheat flour health hazards associated with hereditary iron storage disorders that might accrue from increased iron consumption are assessed factors relating to iron metabolism include the importance of the intestinal mucosa in regulating iron absorption the phenomena of iron storage the significance of heme and nonheme iron and the iron compounds of the body the diseases and disorders characterized by excess body iron are hemosiderosis hemochromatosis and certain anemias while considerable research has been done on iron nutrition the details of absorption transport utilization storage and excretion are not well understood dietary calculations revealed that increased flour enrichment would raise the average daily intakes of males and females it is concluded that this increase will have little impact on the iron accumulation of normal males and will not precipitate hereditary iron storage disorders cj
