the first volume of the series entitled comprehensive virology was published in 1974 and the last is yet to appear we noted in 1974 that virology as a discipline has passed through its descriptive and phenomenological phases and was joining the molecular biology revolution the volumes published to date were meant to serve as an in depth analysis and standard reference of the evolving field of virology we felt that viruses as biological entities had to be considered in the context of the broader fields of molecular and cellular biology in fact we felt then and feel even

more strongly now that viruses being simpler biological models could serve as valuable probes for investigating the biology of the far more complex host cell during the decade long compilation of a series of books like comprehensive virology some of the coverage will obviously not remain up to date the usual remedy to this aspect of science publishing is to produce a second edition however in view of the enormous increase in knowledge about viruses we felt that a new approach was needed in covering virology in the 1980s and 1990s thus we decided to abandon the somewhat arbitrary subgrouping of the subject matter of comprehensive virology under the titles reproduction structure and assembly regulation and genetics additional topics and virus host interactions instead we have organized a new series entitled the viruses

Latent Herpes Virus Infections in Veterinary Medicine

2012-12-06

this seminar referred to latent herpes virus infections in veterinary medicine with emphasis on the domestic animals the phenomenon of latency is of particular importance in veterinary medicine because it can jeopardize the successful control and eradication of diseases such as aujeszky's disease and infectious bovine rhinotracheitis diseases which are often the cause of great economic losses for this reason the commission of the european communities cec realized the importance of summarizing the present state of knowledge on latent herpes virus infections in veterinary medicine a seminar was therefore organized by the federal research institute for animal virus diseases in ttibingen federal republic of germany from september 21 to 23 1982 as a part of the animal pathology programme of the cec the seminar was attended by 50 participants not only from the countries of the cec and 38 papers were selected for presentation in veterinary medicine more intensive investigations on the latency of animal herpes viruses have only relatively recently been initiated in contrast great efforts have been made for many years to elucidate latency in human and primate herpes viruses and consequently the most considerable advances have been made in this field some of the most experienced scientists working on both systems were therefore invited as a result this seminar was the first occasion on which scientists from different countries and faculties investigating herpes virus latency had the opportunity to present and exchange their latest results the

this volume is the first comprehensive scholarly analysis of the strategic reconfiguration of central asia as russia has become more disengaged from the nations in the region and as these nations have developed new relations to the south east and west the international implications are enormous because of the rich energy sources oil and natural gas located in the caspian sea area the authors assess a variety of internal security policy challenges confronting these states for example the potential for conflict arising from such factors as a mixed ethnic population resource scarcity particularly in relation to water management and an islamic revival they also examine the security policy content of relations between the central asian states and regional and international powers specifically the stakes interests and policies of russia china iran turkey and the united states these internal challenges and the evolution of relations with external powers may result in new cooperative relationships but they may also lead to destabilizing rivalry and interstate enmity in central asia it is important to identify new patterns of relevance for future security cooperation in the region but the potential for a new security system or for new institutions to manage security in the region remains uncertain these issues are explored by a team of prominent specialists from western europe the united states russia and china

a lavish collector's edition of the complete poems of eminent japanese master of the haiku matsuo bashō matsuo bashō 1644 1694 is arguably the greatest figure in the history of japanese literature and the master of the haiku bashō the complete haiku of matsuo bashō offers in english a full picture of the haiku of bashō 980 poems in all in fitsimons's beautiful rendering bashō is much more than a philosopher of the natural world and the leading exponent of a refined japanese sensibility he is also a poet of queer love and eroticism of the city as well as the

country the indoors and the outdoors travel and staying put of lonesomeness as well as the desire to be alone
 bashō the complete haiku of matsuo bashō reveals how this work speaks to our concerns today as much as it
 captures a japan emerging from the middle ages for dedicated scholars and those coming upon bashō for the first
 time this beautiful collector s edition of fitsimons s elegant award winning translation with the original japanese
 allows readers to enjoy these works in all their glory

the basis for the effective treatment and cure of a patient is the rapid diagnosis of the disease and its causative
 agent which is based on the analysis of the clinical symptoms coupled with laboratory tests although rapid advance
 ments have been made in the laboratory diagnosis of virus diseases the neces sary isolation of the causative virus
 from the clinical specimens is a relatively long procedure viruses which integrate into the cellular dna such as
 human immunodeficiency virus hiv 1 or hepatitis b virus are difficult to identify by molecular techniques while
 viruses which exist in the clinical material in low concentrations are even more formidable to identify recently the
 application of the polymerase chain reaction per technique developed by k d mullis and detailed in the study by
 saiki et al 1985 led to a revolution in virus diagnosis the per technique was rapidly applied to the diagnosis of
 viruses in clinical material volume 1 of frontiers of virology provides new information on the advan tages of the use
 of the per for the diagnosis of many human disease causing viruses as well as on some problems with its use

in this book the current knowledge on human cytomegalovirus hcmv as a human pathogen is lucidly summarized
 bringing the reader fully up to date with current knowledge concerning hcmv and all the known clinicial and medical
 aspects of diseases caused by and associated with hcmv the book is divided into four parts i human
 cytomegalovirus and human diseases ii human cytomegalovirus infections and the immunocompromised host iii
 diagnosis treatment and prevention of human cytomegalovirus and human diseases and iv molecular aspects of
 human cytomegalovirus each part is put together from chapters written by experts in the respective fields providing
 basic medical and molecular knowledge in addition to more specific understanding of hcmv infections

you damn sadist said mr cummings you try to make people think ezra pound canto 89 what makes herpesviruses
 unique it is certainly not the size of their genomes or the individual features of their reproductive cycle although in
 toto striking features that are exclusive to the herpesviruses abound unquestionably the pre eminent feature is the
 relationship of herpes viruses with their natural hosts as described in preceding volumes all herpesviruses seem to
 be able to colonize and to remain in a latent nonproductive form for life of their hosts once established in the host
 the relationship is best described as that of an armed truce what happens when this truce breaks down or when the
 host encounters the virus for the first time is the subject of this volume we have focused primarily on the five
 human herpesviruses herpes simplex virus 1 hsv 1 herpes simplex virus 2 hsv 2 cytomegalovirus cmv varicella

zoster virus vzv and epstein barr virus ebv because much more is known about them than about any other herpesviruses and because it is of interest to compare both the diversity of manifestations of infections with human herpesviruses and the spectrum of human responses to these viruses this volume summarizes the current knowledge of the pathogenesis and immunobiology of herpesvirus infections in man and describes new and developing approaches to prophylaxis and treatment it contains contributions from distinguished research scientists presently engaged at the forefront of these scientific investigations

herpesviruses classified in the family herpesviridae are important human and animal pathogens that can cause primary latent or recurrent infections and even cancer the major interest in research on herpesviruses today focuses on understanding the organization of the dna genome as well as on characterizing the viral genes in regard to their control and function modern techniques have allowed the viral dna to become a molecular tool in the study of gene function since it is now possible to implant the dna into eukaryotic cells this book contains original studies on the structure and organization of the dna of human and animal herpes viruses the various chapters acquaint the reader with the organization of the viral dna the mrna transcripts the replicative intermediates of the viral dna defective dna genomes and their mode of synthesis analyses of the viral dna sequences in transformed cells and the relationship between the presence of viral dna fragments in the cancer cells and the transformed state of the cells

the studies presented in this special issue of virus genes provide information on the two aspects of virus evolution the ancient evolution of viruses from the time prokaryotic and eukaryotic cells evolved and the ongoing process of the current molecular evolution of viruses the studies of many scientists collected in this issue and many more that were published in other scientific journals provide insight into the molecular evolution of viruses as one of nature's mysteries the use of computer programs to study the nucleotide sequences of viral genomes the amino acid compositions of proteins coded by viral genomes and searches for regulatory mechanisms in viral nucleic acid replication as well as identities of motifs in proteins of viruses from all families will provide additional information on the subject in future issues that will be devoted to this subject the origin and evolution of rna and dna viruses will be further investigated

this collection of essays brings together international lawyers with their perspectives on how the international community has coped with contemporary cases of nationalist crisis and constitutional lawyers from states which are attempting to facilitate the political expression of national identity through developments in federalism devolution and the protection of minority rights the aim is to explore to what extent existing legal mechanisms permit a flexible engagement with and accommodation of the aspirations of national and ethnic groups it would appear that a heightened level of fluidity in the interaction and exchange of normative standards now exists in the relationship between international and domestic law as both types of system confront the challenge which national identity continues to constitute as this process marks a renewed preparedness on the part of legal systems to expand imaginatively to meet current problems it is hoped that this collection will highlight opportunities for an ongoing process of development in this complex and troubled area
