conventional economic accounts which measure gross national product gnp and related indicators of national performance do not fully allow for the damages caused to the environment in the course of producing and consuming goods and services nor do they fully account for the fact that some resources are being depleted in achieving the living standards that we enjoy today this failure is important because policy makers are guided by the changes in macroeconomic indicators such as gnp moreover such indicators are not a good guide to the sustainability of present practices of consumption and production this book provides practical estimates of one key area of neglect in the present national accounts the measurement of environmental damages the book sets out the methodology for making such estimates and then applies it to data from four countries germany italy the netherlands and the uk the results show what can be achieved in the way of consistent damage estimates and what the key problems are
