invertebrate zoology a tree of life approach is a comprehensive and
authoritative textbook adopting an explicitly phylogenetic
organization most of the classical anatomical and morphological work
has not been changed it established the foundation of invertebrate
zoology with the explosion of next generation sequencing approaches

there has been a sea change in the recognized phylogenetic relationships among and between invertebrate lineages in addition the merger of evolutionary and developmental biology evo devo has dramatically contributed to changes in the understanding of invertebrate biology synthesizing these three approaches classical morphology sequencing data and evo devo studies offers students an entirely unique perspective of invertebrate diversity key features one of the first textbooks to combine classical morphological approaches and newer evo devo and next generation sequencing approaches to address invertebrate zoology organized along taxonomic lines in accord with the latest understanding of invertebrate phylogeny will provide background in basic systematic analysis useful within any study of biodiversity a wealth of ancillary materials for students and teachers including downloadable figures lecture slides web links and phylogenetic data matrices

the book integrates our understanding of the factors and processes underlying the evolution of multicellularity by providing several complementary perspectives both theoretical and experimental and using examples from various lineages in which multicellularity evolved recent years marked an increased interest in understanding how and why these transitions occurred and data from various fields are providing new insights into the forces driving the several independent transitions to multicellular life as well as into the genetic and molecular basis for the evolution of this phenotype the ultimate goal of this book is to facilitate the identification of general and unifying principles and mechanisms

animal evolution has always been at the core of biology but even today many fundamental questions remain open the field of animal evo devo is leveraging recent technical and conceptual advances in development paleontology genomics and transcriptomics to propose radically different answers to traditional evolutionary controversies this book is divided into four parts each of which approaches animal evolution from a different perspective the first part chapters 2 and 3 investigates how new sources of evidence have changed conventional views of animal origins while the second chapters 4 8 addresses the connection between embryogenesis and evolution and the genesis of cellular tissue and morphological diversity the third part chapters 9

and 10 investigates how big data in molecular biology is transforming our understanding of the mechanisms governing morphological change in animals in closing the fourth part chapters 11 13 explores new theoretical and conceptual approaches to animal evolution old questions and young approaches to animal evolution offers a comprehensive and updated view of animal evolutionary biology that will serve both as a first step into this fascinating field for students and university educators and as a review of complementary approaches for researchers

a new theory about the origins of consciousness that finds learning to be the driving force in the evolutionary transition to basic consciousness what marked the evolutionary transition from organisms that lacked consciousness to those with consciousness to minimal subjective experiencing or as aristotle described it the sensitive soul in this book simona ginsburg and eva jablonka propose a new theory about the origin of consciousness that finds learning to be the driving force in the transition to basic consciousness using a methodology similar to that used by scientists when they identified the transition from non life to life ginsburg and jablonka suggest a set of criteria identify a marker for the transition to minimal consciousness and explore the far reaching biological psychological and philosophical implications after presenting the historical neurobiological and philosophical foundations of their analysis ginsburg and jablonka propose that the evolutionary marker of basic or minimal consciousness is a complex form of associative learning which they term unlimited associative learning ual ual enables an organism to ascribe motivational value to a novel compound non reflex inducing stimulus or action and use it as the basis for future learning associative learning ginsburg and jablonka argue drove the cambrian explosion and its massive diversification of organisms finally ginsburg and jablonka propose symbolic language as a similar type of marker for the evolutionary transition to human rationality to aristotle s rational soul

The Evolution of the Sensitive Soul

epigenetic mechanisms of the cambrian explosion provides readers with a basic biological knowledge and epigenetic explanation of the biological puzzle of the cambrian explosion the unprecedented rapid diversification of animals that began 542 million years ago during an evolutionarily instant of 10 million years which represents only 0.3% of the time of existence of life on earth or less than 2% of the time of existence of metazoans all of the 30 extant body plans major animal groups phyla and several extinct groups appeared the work helps address this phenomena and tries to answer remaining questions for evolutionary biology epigenetics and scientific researchers the book recognizes and presents objective representations of alternative theories for epigenetic evolution in this period with the author drawing on his epigenetic theory of evolution to explain the causal basis of the cambrian explosion both empirical evidence and theoretical arguments are presented in support of this thought provoking epigenetic theory explains the cambrian explosion from an entirely epigenetic view takes a causal rather than descriptive approach to the phenomenon allows for a broad readership including

those with only a basic biological knowledge while maintaining scientific rigor
