 years old and up who s looking to hit the road on two wheels author philip buonpastore a motorcycle journalist and retired us air force photographer helps readers gear up to get back
 on a motorcycle or get on one for the first time in part 1 becoming a motorcyclist buonpastore discusses the basics of buying the right bike gear and equipment and getting the bike
 up to speed the book continues with a good overview of learning to ride the importance of taking a road course venturing out on the first ride and extending rides to long distance
 jaunts throughout part 1 are sidebars by riding safety instructor and expert walt fulton offering sound advice on safety precautions and execution for every leg of the new and
 returning rider s journey the author emphasizes what older riders should be aware of and which factors can affect their rides adding lots of great firsthand advice are humorous and
 helpful stories collected by the author and related by returning riders at various ages from their late 30s to 60s in part 2 buonpastore shares five of his favorite travelogues covering his
 long distance tours around the us from the american south to the west coasts this section is illustrated by over 100 of the author s breathtaking photographs of the various locations he
 toured on his bike the foreword to the book is provided by best selling motorcycle author david hough author of i 5 press s proficient motorcycling and mastering the ride hough

 newest cars or the latest breakthroughs in science pm is the ultimate guide to our high tech lifestyle boltzmann s formula s in w e defines the microcanonical ensemble the usual
 textbooks on statistical mechanics start with the microensemble but rather quickly switch to the canonical ensemble introduced by gibbs this has the main advantage of easier
 analytical calculations but there is a price to pay oco for example phase transitions can only be defined in the thermodynamic limit of infinite system size the question how phase
 transitions show up from systems with say 100 particles with an increasing number towards the bulk can only be answered when one finds a way to define and classify phase
 transitions in small systems this is all possible within boltzmann s original definition of the microcanonical ensemble starting from boltzmann s formula the book formulates the
 microcanonical thermodynamics entirely within the frame of mechanics this way the thermodynamic limit is avoided and the formalism applies to small as well to other
 nonextensive systems like gravitational ones phase transitions of first order continuous transitions critical lines and multicritical points can be unambiguously defined by the curvature
 of the entropy s e n special attention is given to the fragmentation of nuclei and atomic clusters as a peculiar phase transition of small systems controlled among others by angular
 momentum the dependence of the liquid gas transition of small atomic clusters under prescribed pressure is treated thus the analogue to the bulk transition can be studied the book
 also describes the microcanonical statistics of the collapse of a self gravitating system under large angular momentum contents the mechanical basis of thermodynamics micro canonical
