computing provides companies with many

capabilities to meet their business needs but

can also mean that a hybrid architecture is

created that includes on premise systems and

the cloud integration is needed to bridge the

gap between the on premise existing systems

and the new cloud applications platform and

the challenge of integrating cloud

applications with on premise systems cloud

applications to cloud applications and on

premise to on premise applications it contains

a graphical development environment that

provides built in connectivity to many cloud

and on premise applications and reusable

solution templates that can be downloaded from

a solution repository the integration

solutions that are created can then run on

either an on premise integration appliance or

the multi tenant websphere cast iron live

cloud service this ibm redbooks publication is

intended for application integrators

microservices is an architectural style in  
which large complex software applications are  
composed of one or more smaller services each  
of these microservices focuses on completing  
one task that represents a small business  
capability these microservices can be  
developed in any programming language they  
communicate with each other using language  
neutral protocols such as representational  
state transfer rest or messaging applications  
such as ibm mq light this ibm redbooks  
publication gives a broad understanding of  
this increasingly popular architectural style  
and provides some real life examples of how  
you can develop applications using the bach js 6
