washington state is about to enter a new phase of the math wars since the late 1980s the debate over how best to teach mathematics to schoolchildren has raged worldwide among educators politicians and parents the stakes are high to operate effectively in a global twenty first century economy and polity the united states must provide an education in mathematics that is both excellent and equitable in this volume four scholars at the washington school research center wsrc at seattle pacific university present original research drawn from statistical studies of state educational data and from thousands of classroom observations carried out by the berc group they assess the current state of math education and review its history and development the authors also provide a dispassionate review of the extensive international national and state literature the in depth observational research in winning the math wars confirms that the real issue is neither the approach to teaching

traditional or reform nor the type of curriculum if america's goal of educational equity and excellence is to be achieved then math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students the authors discussion focus on four principles for improving math teaching and learning fidelity to reform efforts by all involved an emphasis on instruction and instructional tools the critical nature of mathematical knowledge and the need for transformational change winning the math wars is an important book for policy makers school leaders practitioners of mathematics education parents and anyone who wants to make sense of the math wars

this volume contains the proceedings of the stanford symposium

on algebraic topology applications and new directions held from  
july 23 27 2012 at stanford university stanford california the  
symposium was held in honor of gunnar carlsson ralph cohen  
and ib madsen who celebrated their 60th and 70th birthdays that  
year it showcased current research in algebraic topology  
reflecting the celebrants broad interests and profound influence  
on the subject the topics varied broadly from stable equivariant  
homotopy theory to persistent homology and application in data  
analysis covering topological aspects of quantum physics such as  
string topology and geometric quantization examining  
homology stability in algebraic and geometric contexts including  
algebraic theory and the theory of operads

this book is a lightly edited version of the unpublished manuscript maximal cohen macaulay modules and tate cohomology over gorenstein rings by ragnar olaf buchweitz the

central objects of study are maximal cohen macaulay modules over not necessarily commutative gorenstein rings the main result is that the stable category of maximal cohen macaulay modules over a gorenstein ring is equivalent to the stable derived category and also to the homotopy category of acyclic complexes of projective modules this assimilates and significantly extends earlier work of eisenbud on hypersurface singularities there is also an extensive discussion of duality phenomena in stable derived categories extending tate duality on cohomology of finite groups another noteworthy aspect is an extension of the classical bgg correspondence to super algebras there are numerous examples that illustrate these ideas the text includes a survey of developments subsequent to and connected with buchweitz s manuscript

learning often begins with an experience in the body our body can tighten or feel expansive depending on different learning contexts this experience of learning in the body is crucial to holistic education this book explores embodied learning from several perspectives this first section explores how psychology can inform us about embodied learning for example the work of carl jung and wilhelm reich devoted much of their thinking to how energy manifests itself in the body meditation and movement are also examined as ways of embodied learning for example dalcroze a form of movement education is presented

within the context of whole person education the book also presents schools where embodied learning is nurtured waldorf education is discussed as well as a public school in toronto where the body is central to holistic education the book also presents visions of embodied learning john miller presents a holistic vision of teacher education and tobin hart who has written extensively in this field writes about the embodied mind embodied learning is an emerging area of inquiry in holistic education and this book presents a variety of perspectives and practices that should be helpful to both scholars and practitioners
