

Epub free Operation research and computer networking lab manual (Download Only)

computer network is a system of interconnected computers and other devices that can exchange data and share resources with each other. Computer networking may be considered a branch of computer science, computer engineering, and telecommunications since it relies on the theoretical and practical application of the related disciplines.

Computer networking is the process of connecting two or more computers together so that they can share data and resources. This can be done in a variety of ways, including wired and wireless connections. The purpose of computer networking is to allow users to communicate and share information more easily and efficiently.
