farmers who live in fragile tropical hillsides often operate under severe resource constraints and face difficult tradeoffs when confronted with changes in production conditions using a bioeconomic linear programming model this study simulates the effects of population market and technological changes on farmers income and on their management of the natural resource in a hillside area of central honduras the results show that economic growth and agricultural intensification are not necessarily adverse for fragile environments in fact farmer incomes would be much lower and degradation much higher if intensive agriculture had not been adopted such a result however must be framed within a complex set of conditioning factors among which

agroecology plays a fundamental role although the economic advantages of horticultural production are clear in the area studied this strategy is not suited for all contexts this report offers a series of policy recommendations that implicitly recognize such limitations thereby helping to direct resources where they will have their greatest impact

Fort Bliss Mission and Master Plan (TX,NM) 2003-04-21

the foundations of complex evolving economies seeks to offer an integrated analysis of the anatomy and physiology of the capitalist engine of generation and exploitation of technological organizational and institutional innovations from the drivers of knowledge accumulation to the modes in which such knowledge is incorporated into business firms all the way to the processes of innovation driven schumpeterian competition and macroeconomic growth in that it advances the interpretation of such patterns in terms of economies seen as complex evolving systems the basic objects of analysis are the history of the emergence and development of modern capitalist economies and their current functionings indeed the tall ambition of the book is to address two basic questions at the core of the whole economic discipline since its inception they regard first the drivers and patterns of change of the capitalistic machine of production and innovation and second the mechanisms of coordination among a multitude of self seeking economic agents often characterized by conflicting interests in order to do that this manual in addition to the nature of technology and innovation considers from a profoundly alternative perspective all domains of analysis typically addressed or not by microeconomic texts including micro behaviours the theory of the firm the theory of production consumption patterns market dynamics and industrial evolution

Reintroduction of the Mexican Wolf Within Its Historic Range in the Southwestern United States 2013-03-01

in the new chapters they deal with the international dimensions of technological change including underdevelopment technology transfer international trade and globalization they have also strengthened the historical account of the rise of new technologies a main feature of earlier editions
