Flight Information Manual

1961

during the last decades soil organic carbon soc attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth s climate system which has a great potential to be managed by humans soils as a carbon pool are one of the key factors in several sustainable development goals in particular goal 15 protect restore and promote sustainable use of terrestrial ecosystems sustainably manage forests combat desertification and halt and reverse land degradation and halt biodiversity loss with the soc stock being explicitly cited in indicator 15 3 1 this technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on soc content in a wide array of environments including the advantages drawbacks and constraints this manual presents different sustainable soil management ssm practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on soc stocks and successful experiences of soc sequestration in practical field applications volume 4 includes 51 case studies dealing with cropland grassland integrated systems and farming approaches

1910

nutritional security and ecosystem sustainability are the biggest challenges of the 21st century globally 2.3 billion people suffer from malnutrition according to estimates by the world bank malnutrition globally costs 3.5 trillion per year on the other hand the production and availability of staple food is the major emphasis for conventional farming in developing and underdeveloped countries for assured food security these staple foods are high in carbohydrates and energy availability but low in nutritional value such as concerning micronutrient phytochemical and vitamin contents apart from adequate food there should be consistent access availability and affordability of foods and beverages that are nutrient dense promote well being and

minimize diseases from the experience of the recent covid 19 crisis the importance of adequate dietary habits has been emphasized globally since food nutrients are considered inherent sources of immunomodulation

structural change is a process in which the amount of labour capital and land dedicated to agriculture and other sectors changes over time in this study we focus on the cases of peru and nicaragua using their two most recently administered agricultural censuses the agricultural censuses permit us to identify dimensions and information available to study the process of structural change in latin america over the last 20 years the study includes a comparative analysis and policy recommendations based on the two most recent agricultural censuses administered in nicaragua 2001 and 2011 and peru 1994 and 2012 processing and analysing information from these censuses contribute to identifying dimensions and information available to study the process of structural change in latin america over the last 20 years evidence based policymaking is increasingly more at the core of the united nations and member countries activity in the case of fao this type of study is crucial to build the knowledge body on which projects and activities are carried forward the hand in hand hih initiative is a key example in this context as it aims at quantitatively identifying high impact and high agricultural potential areas in which to invest within developing countries as nicaragua and peru are hih s target countries this study will show very useful to learn about their recent experiences in agricultural transformations

as agroecology gains momentum in the international research for development arena there is an urgent need for methods and tools to support the codesign and evaluation of agroecological systems and their transitions the social and ecological complexity of agroecosystems their dynamics uncertainties and sustainability calls for a holistic systemic approach to agroecology as such several questions arise for example how do we deal with heterogeneity landscapes biodiversity or learning processes in agroecosystems analysis how do we categorise diversity or analyse trade offs in social ecological interactions how do we conceptualise codesign and monitor agroecological transitions this book sets out to answer these questions by building on the valuable classics in agroecology the book presents a systems perspective that underpins a combination of methodologies ranging from participatory tools and field observations to mathematical simulation modelling researchers advanced students and transdisciplinary practitioners will find in this book insights and methods to design research and co innovation processes to foster agroecological transitions
